ISO/TR 24679-8:2022-05 (E)

Fire safety engineering - Performance of structures in fire - Part 8: Example of a probabilistic assessment of a concrete building

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms, definitions and symbols 1
3.1 Terms and definitions 1
3.2 Symbols 1

4 Design strategy for fire safety of structure 3

5 Quantification of the performance of structures in fire 4
5.1 STEP 1: Scope of the project for fire safety of structure 4
5.1.1 Built-environment characteristics 4
5.1.2 Fuel loads 7
5.1.3 Mechanical actions 7
5.2 STEP 2: Identifying objectives, functional requirements and performance criteria for fire safety of structures 9
5.3 STEP 3: Trial plan for fire safety of structures 9
5.4 STEP 4: Design fire scenarios and design fires 9
5.5 STEP 5: Thermal response of the structures 9
5.6 STEP 6: Mechanical response of the structures 10
5.6.1 Structural model 10
5.6.2 Stochastic variables 11
5.6.3 Probabilistic evaluation of the column load bearing capacity 13
5.7 STEP 7: Assessment against the fire safety objectives 14
5.7.1 Example assessment 1: full probabilistic analysis -- user-calculated analysis 14
5.7.2 Example assessment 2: full probabilistic analysis -- listed fragility curve 18
5.7.3 Example assessment 3: semi-probabilistic assessment 20
5.8 STEP 8: Documentation of the design for fire safety of structures 22
