Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Metrological traceability chain and calibration hierarchy 7
4.1 Principles 7
4.2 Structure and nomenclature 8
4.3 Considerations in establishing metrological traceability 12
4.4 Functions of reference materials 13

5 Calibration transfer protocols 13
5.1 Availability and structure 13
5.2 Cases with primary reference measurement procedure and primary calibrator(s) giving metrological traceability to SI 14
5.3 Cases with international conventional reference measurement procedure (which is not primary) and international conventional calibrator(s) without metrological traceability to SI 15
5.4 Cases with international conventional reference measurement procedure (which is not primary) but no international conventional calibrator and without metrological traceability to SI 16
5.5 Cases with international conventional calibrator (which is not primary) but no international conventional reference measurement procedure and without metrological traceability to SI 17
5.6 Cases with manufacturer's selected measurement procedure but neither international conventional reference measurement procedure nor international conventional calibrator and without metrological traceability to SI 18
5.7 Trueness control materials 19

6 Expression of uncertainty of measurement 19

7 Validation of metrologically traceable calibration 20

8 Information on metrological traceability to be given in the instructions for use of an in vitro diagnostic medical device 21
