DIN EN 1993-1-6:2017-07 (E)

Eurocode 3 - Design of steel structures - Part 1-6: Strength and Stability of Shell Structures

Contents **Page**

1. General **4**
1.1 Scope 4
1.2 Normative references 6
1.3 Terms and definitions 6
1.4 Symbols 11
1.5 Sign conventions 15

2 Basis of design and modelling **15**
2.1 General 15
2.2 Types of analysis 15
2.3 Shell boundary conditions 17

3 Materials and geometry **18**
3.1 Material properties 18
3.2 Design values of geometrical data 18
3.3 Geometrical tolerances and geometrical imperfections 18

4 Ultimate limit states in steel shells **19**
4.1 [A1] LS1: Plastic failure limit state [A1] 19
4.2 Design concepts for the limit states design of shells 20

5 Stress resultants and stresses in shells **23**
5.1 Stress resultants in the shell 23
5.2 Modelling of the shell for analysis 23
5.3 Types of analysis 26

6 [A1] Plastic failure limit state (LS1) [A1] **26**
6.1 Design values of actions 26
6.2 Stress design 26
6.3 Design by global numerical MNA or GMNA analysis 27
6.4 Direct design 28

7 Cyclic plasticity limit state (LS2) **28**
7.1 Design values of actions 28
7.2 Stress design 29
7.3 Design by global numerical MNA or GMNA analysis 29
7.4 Direct design 30

8 Buckling limit state (LS3) **30**
8.1 Design values of actions 30
8.2 Special definitions and symbols 30
8.3 Buckling-relevant boundary conditions 31
8.4 Buckling-relevant geometrical tolerances 31
8.5 Stress design 38
[A1] 8.6 Design using reference resistances [A1] 40
8.7 Design by global numerical analysis using MNA and LBA analyses 42
8.8 Design by global numerical analysis using GMNIA analysis 45

9 Fatigue limit state (LS4) 50

9.1 Design values of actions 50
9.2 Stress design 50
9.3 Design by global numerical LA or GNA analysis 51

ANNEX A (normative) 52

Membrane theory stresses in shells 52

A.1 General 52
A.2 Unstiffened cylindrical shells 53
A.3 Unstiffened conical shells 54
A.4 Unstiffened spherical shells 55

ANNEX B (normative) 56

[A1⟩ Additional expressions for plastic reference resistances ⟨A1] 56

B.1 General 56
B.2 Unstiffened cylindrical shells 57
B.3 Ring stiffened cylindrical shells 59
B.4 Junctions between shells 61
B.5 Circular plates with axisymmetric boundary conditions 64

ANNEX C (normative) 65

Expressions for linear elastic membrane and bending stresses 65

C.1 General 65
C.2 Clamped base unstiffened cylindrical shells 66
C.3 Pinned base unstiffened cylindrical shells 68
C.4 Internal conditions in unstiffened cylindrical shells 70
C.5 Ring stiffener on cylindrical shell 71
C.6 Circular plates with axisymmetric boundary conditions 73

ANNEX D (normative) 75

Expressions for buckling stress [AC⟩ *deleted text* ⟨AC] 75

D.1 Unstiffened cylindrical shells of constant wall thickness 75
D.2 Unstiffened cylindrical shells of stepwise variable wall thickness 85
D.3 Unstiffened lap jointed cylindrical shells 90
D.4 Unstiffened complete and truncated conical shells 92

[A1⟩ Annex E (normative) 97

Expressions for reference resistance design ⟨A1] 97
