DIN EN 16967:2017-10 (E)

Animal feeding stuffs - Methods of sampli ng and analysis - Predictive equations for metabolizable energy in feed materials and compound feed (pet food) for cats and dogs including dietetic food

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 6
4.1 Determination of GE 6
4.2 Determination of DE 6
4.3 Determination of ME 6
4.4 Mathematical prediction of ME in food for cats and dogs 7
4.5 Conversion factors 7
4.6 Nitrogen-free extract (NFE) 7

5 Reagents and materials 7

6 Apparatus 7

7 Sampling 8

8 Sample preparation 8

9 Measurements 8
9.1 Moisture 8
9.2 Protein (crude) 8
9.3 Fat (crude) 8
9.4 Ash (crude) 8
9.5 Fibre (crude) 8

10 Determination of energy by calculation 8
10.1 Complete or complementary compound feed for dogs and cats 8
10.2 Examples 10
10.3 Other products 11

11 Accuracy 11

12 Tolerances 12

13 Test report 12

Annex A (informative) General background information 13

A.1 Pet Food from Industrial Processing (PFIP) 13
A.2 Determination of ME in PFIP 13
A.3 Development of the factors 13

Annex B (informative) Metabolizable energy in pet food - a comparison between the accuracy of predictive formulae versus experimental determination 15

B.1 Background 15
B.2 Materials and methods 15
B.3 Results 16
B.4 Discussion 30
