DIN EN 17049:2018-05 (E)

Animal feeding stuffs: Method s of sampling and analysis - Identification of tylosin, spiramycin, virginiamycin, carbadox and olaquindox at sub-additive levels in compound feed - Confirmatory analysis by LC-MS

European foreword 5

1 Scope 6

2 Normative references 6

3 Principle 6

4 Reagents and materials 6
4.1 General 6
4.2 Reagents and materials 7
4.2.1 Acetonitrile (LC-MS grade) 7
4.2.2 Methanol (LC-MS grade) 7
4.2.3 Formic acid (LC-MS grade) 7
4.2.4 Tylosin 7
4.2.5 Spiramycin 7
4.2.6 Virginiamycin 7
4.2.7 Carbadox 7
4.2.8 Olaquindox 7
4.3 Solutions 7
4.3.1 HPLC Mobile phase A: Formic acid 5mM 7
4.3.2 HPLC Mobile phase B: Formic acid 50 mM/ acetonitrile (10/90, v/v) 7
4.4 Standard solutions 7
4.4.1 Stock solution tylosin (500 g/ml) 7
4.4.2 Stock solution spiramycin (500 g/ml) 7
4.4.3 Stock solution virginiamycin (500 g/ml) 7
4.4.4 Stock solution carbadox (500 g/ml) 8
4.4.5 Stock solution olaquindox (500 g/ml) 8
4.4.6 Mixed stock solution 1 8
4.4.7 Mixed stock solution 2 8
4.4.8 Calibration standard 8

5 Apparatus 8

6 Sampling 9

7 Sample preparation 9
7.1 Sample pre-treatment 9
7.2 Quality control samples 9
7.3 Sample extraction 10
7.4 Sample purification 10
7.5 Sample preparation for LC-MS/MS 10
7.6 Confirmation control 10

8 LC-MS/MS analysis 10
8.1 General 10
8.2 LC-MS/MS experimental conditions 10
8.3 Initial test 11
8.4 Analysis of samples 11

9 Data processing and interpretation of results 11
9.1 Data processing 11
9.2 Recording and calculation of identification parameters 11

10 Criteria for acceptance of the analytical results 12
10.1 General 12
10.2 Run acceptance 12
10.3 Identification of the analyte 12
10.3.1 General 12
10.3.2 Retention time criterion 12
10.3.3 Ion ratio criterion 12

11 Test report 13

Annex A (informative) Results of the interlaboratory study 14

A.1 Procedure 14
A.2 Materials 14
A.3 Statistical analysis of results 15
A.4 Results and interpretation - Precision 16

Annex B (informative) Run and sample acceptance form 24

Annex C (informative) Quantitative analysis 25

C.1 General 25
C.2 Procedure quantitative analysis 25
C.2.1 Sample pre-treatment quantitative analysis 25
C.2.2 Quality control samples 25
C.2.3 Sample extraction 26
C.2.4 Sample purification 26
C.2.5 Sample preparation for LC-MS/MS 26
C.2.6 Recovery control 26
C.2.7 Confirmation control 26
C.2.8 LC-MS/MS analysis 27
C.2.8.1 LC-MS/MS experimental conditions 27
C.2.8.2 Initial test 28
C.2.8.3 Analysis of samples 28
C.3 Data processing and interpretation of results 29
C.3.1 Data processing 29
C.3.2 Recording and calculation of identification parameters 29
C.3.3 Calculation of the amount of analyte in the sample 29
C.3.4 Calculation of recovery percentage 29
C.4 Criteria for the acceptance of the analytical result 29
C.4.1 General 29
C.4.2 Run acceptance 30
C.4.3 Identification of the analyte 30
C.4.3.1 General 30
C.4.3.2 Retention time criterion 30
C.4.3.3 Ion ratio criterion 30
C.5 Notes on the procedure 31
C.5.1 Influence of ionization suppression 31
C.5.2 Comments on the quantitive accuracy 31
C.5.3 Comments on the relevance of recovery percentage 31

Annex D (informative) Run and sample acceptance form 32
