DIN EN ISO 10819:2013-12 (E)

Mechanical vibration and shock - Hand-arm vibration - Measurement and evaluation of the vibration transm issibility of gloves at the palm of the hand (ISO 10819:2013)

Contents

Page

Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Symbols and abbreviations 6

5 Measuring principle and equipment 7
5.1 General principle and setup 7
5.2 Measuring equipment 8
5.3 Vibration excitation system 11

6 Measurement conditions and procedure 12
6.1 Measurement conditions 12
6.2 Vibration signal 14
6.3 Test procedure 15

7 Evaluation of results 17
7.1 Calculation of transmissibility 17
7.2 Bare palm adaptor vibration transmissibility 19
7.3 Uncorrected glove vibration transmissibility 20
7.4 Corrected glove vibration transmissibility 20

8 Calculation of statistical values 21
8.1 General 21
8.2 One-third-octave vibration transmissibility 21
8.3 Frequency-weighted vibration transmissibility 22

9 Criteria for designating gloves as antivibration gloves 22
9.1 General 22
9.2 Vibration transmissibility of the gloves 22
9.3 Construction of the gloves 23

10 Test report 25

Annex A (informative) Examples of handles with force and acceleration measuring systems 27
