DIN/TR 10133:2021-09 (E)

Toxicological assessment of additives for tobacco products - A guidance; Text in English

Inhalt

Seite

Foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Overview of current legal requirements, agreements and proposals 6

5 General discussion of toxicological examination of additives 10
5.1 Purpose 10
5.2 Basic considerations 11
5.2.1 General 11
5.2.2 Application of Threshold of Toxicological Concern (TTC) 12
5.2.3 Impact of additives on the overall toxicity of cigarettes 15
5.2.4 Test matrix 16
5.2.5 Smoke or aerosol generation 18
5.2.6 Test material 19
5.2.7 Dose parameters 21
5.2.8 In *vivo* versus *in vitro* testing 21
5.2.9 Positive controls 22
5.2.10 Discriminatory power of test systems 22
5.3 Toxicological data for the unburnt additive 23
5.4 Toxicological testing of the additive after combustion or heating 24
5.4.1 Chemical analytical processes 24
5.4.2 Biological test systems 27
5.5 Interpretation and evaluation of toxicological data 37
5.5.1 Cigarettes 37
5.5.2 Heated tobacco products 38

6 Conclusions and recommendations 38
6.1 General 38
6.2 Toxicological data for the additive as a neat single substance 38
6.3 Application of Toxicological Threshold of Concern (TTC) 38
6.4 Pyrolysis of the additive as a neat single substance 39
6.4.1 Cigarettes 39
6.4.2 Heated tobacco products 39
6.5 Chemical and toxicological effects of additives on tobacco smoke or aerosol 39
6.6 Assessment of test results 41

Annex A (informative) Examples of databases supplying authorized and peer-reviewed toxicological data 45

Annex B (informative) Examples of applying TTC to additive evaluations 49
B.1 General 49
B.2 Geraniol (CAS 106-24-1) 49
B.3 Fig juice concentrate (CAS 90028-74-3) 50

Bibliography 52

Figures

Figure 1 — Theoretical example of toxicity due to the combustion of the additives compared to the additive-free tobacco 16
