ISO/IEC 24767-1:2008-09 (E)

Information technology_- Home network security_- Part_1: Security requirements

CONTENTS

FOREWORD 4
1 Scope 5
2 Terms, definitions and abbreviations 5
2.1 Terms and definitions 5
2.2 Abbreviations 6
3 Conformance 6
4 Security requirements for home electronic systems and networks 6
4.1 General 6
4.2 Home electronic system security 7
4.3 Issues related to HES security but out of scope of this standard 11
5 Challenges 12
5.1 General 12
5.2 Always-on challenge 12
5.3 Power line challenge 12
5.4 Wireless challenge 13
5.5 Complex assortment devices challenge 13
5.6 Many and diverse user needs 13
5.7 Many and diverse applications 13
6 Security models 14
6.1 Introduction 14
6.2 Owner supported single home HES (OSS) 14
6.3 Externally supported single home HES (ESS) 14
6.4 Externally supported multiple homes HES (ESM) 14
7 Threat analysis 15
7.1 General 15
7.2 Unauthorized access 15
7.3 Malicious software and configuration 16
7.4 Denial of service 17
7.5 Unintended modification of data during communication 17
7.6 User errors 17
7.7 System failures 17
7.8 Security service providers 17
8 Security requirements 17
8.1 General 17
8.2 Access control 18
8.3 Data and message authentication 19
8.4 Remote access control 19
8.5 Protection of communications 19
8.6 Firewalls 20
8.7 Virus protection 20
8.8 Protection against denial of service attacks 20
8.9 Auditing 21
8.10 Recovery 21
9 Requirements on security solutions 21

9.1 General 21
9.2 Different levels of security services for different applications in a home 21
9.3 Convenience 22
Annex A (informative) Comparison between office IT systems and home electronic system security requirements 23
Bibliography 24
