

ISO/IEC 24767-1:2008-09 (E)

Information technology - Home network security - Part_1: Security requirements

CONTENTS

FOREWORD	4
1 Scope	5
2 Terms, definitions and abbreviations	5
2.1 Terms and definitions	5
2.2 Abbreviations	6
3 Conformance	6
4 Security requirements for home electronic systems and networks.....	6
4.1 General	6
4.2 Home electronic system security	7
4.3 Issues related to HES security but out of scope of this standard.....	11
5 Challenges	12
5.1 General	12
5.2 Always-on challenge	12
5.3 Power line challenge	12
5.4 Wireless challenge	13
5.5 Complex assortment devices challenge	13
5.6 Many and diverse user needs	13
5.7 Many and diverse applications.....	13
6 Security models.....	14
6.1 Introduction	14
6.2 Owner supported single home HES (OSS).....	14
6.3 Externally supported single home HES (ESS).....	14
6.4 Externally supported multiple homes HES (ESM)	14
7 Threat analysis.....	15
7.1 General	15
7.2 Unauthorized access	15
7.3 Malicious software and configuration	16
7.4 Denial of service	17
7.5 Unintended modification of data during communication	17
7.6 User errors	17
7.7 System failures	17
7.8 Security service providers	17
8 Security requirements.....	17
8.1 General	17
8.2 Access control.....	18
8.3 Data and message authentication.....	19
8.4 Remote access control	19
8.5 Protection of communications.....	19
8.6 Firewalls.....	20
8.7 Virus protection	20
8.8 Protection against denial of service attacks	20
8.9 Auditing.....	21
8.10 Recovery.....	21
9 Requirements on security solutions	21

9.1	General	21
9.2	Different levels of security services for different applications in a home	21
9.3	Convenience	22
Annex A (informative)	Comparison between office IT systems and home electronic system security requirements	23
Bibliography.....		24
Figure 1 – A concept model of home networks.....		10
Figure 2 – Different considerations in different home environments		11
Table 1 – Security threats and corresponding defences		18
