DIN SPEC 91345:2016-04 (E)

Reference Architecture Model Industrie 4.0 (RAMI4.0)

Contents

Page

Foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 6

4 Assets in Industrie 4.0 9
4.1 The object world 9
4.2 Information carriers 9
4.3 Assets and the information world 10
4.4 Life ("vita") and characterization of an asset 11
4.5 Means by which an asset is presented, or made known in the information system 12
4.5.1 General 12
4.5.2 Unknown assets 13
4.5.3 Anonymously known assets 13
4.5.4 Individually known assets 13
4.5.5 Assets administered as entities 13
4.6 State in the lifetime ("vita") 14
4.6.1 General 14
4.6.2 Type 14
4.6.3 Instance 15
4.7 Communication capability 15
4.7.1 Communication capability of assets in the physical world 15
4.7.2 Communication capability of assets in the information world 16
4.8 Classification of assets in terms of presentation and communication capability 17
4.9 Representation by means of information and technical functionality 18

5 Reference Architecture Model Industrie 4.0 (RAMI4.0) 19
5.1 General 19
5.2 Architecture axis ("Layers") 20
5.2.1 Overview 20
5.2.2 Business layer 20
5.2.3 Functional layer 20
5.2.4 Information layer 21
5.2.5 Communication layer 21
5.2.6 Integration layer 22
5.2.7 Asset layer 22
5.3 Life cycle & value stream axis 23
5.4 Hierarchy axis 23

6 Industrie 4.0 components 24
6.1 General 24
6.1.1 Overview 24
6.1.2 Properties of I4.0 components 24
6.1.3 Identifiability 25
6.1.4 State in the lifetime ("vita") 25
6.1.5 Secure I4.0-compliant communication, services and quality of service 25
6.1.6 Representation by information with I4.0-compliant semantics 26

6.1.7 I4.0 system consisting of I4.0 components 27
6.1.8 Nestability 27
6.1.9 Encapsulability 28
6.1.10 Domain specific functionality and state model 29
6.2 Administration shell of I4.0 components 30
6.2.1 General 30
6.2.2 Basic structure of the administration shell 30
6.2.3 DF header and DF body 30
6.2.4 Partial models and views 31
6.2.5 Properties 33
6.2.6 Managing the administration shell 35
6.2.7 Fundamental requirements for the administration shell 37
6.3 Forms of I4.0 components 38
6.3.1 Different assets with administration shells 38
6.3.2 Asset with multiple administration shells 39
6.3.3 Administration shell for multiple assets 39
