ISO 22514-7:2012-09 (E)

Statistical methods in process management - Capability and performance - Part 7: Capability of measurement processes

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Symbols and abbreviated terms 6
4.1 Symbols 6
4.2 Abbreviated terms 8

5 Basic principles 9
5.1 General 9
5.2 Resolution 11
5.3 MPE known and used 11
5.4 Capability and performance limits for measuring system and measurement process 11

6 Implementation 11
6.1 General 11
6.2 Factorsthatinfluencethemeasurementprocess 11

7 Studies for calculating the uncertainty components 17
7.1 Measuring system 17
7.2 Uncertainty components of the measurement process 22

8 Calculation of combined uncertainty 22
8.1 General 22
8.2 Calculation of expanded uncertainty 24

9 Capability 24
9.1 Performance ratios 24
9.2 Capability indices 25

10 Capability of the measurement process compared to the capability of the production process 25
10.1 Relation between observed process capability and measurement capability ratio 25
10.2 Relation between observed process capability and measurement capability 27

11 Ongoing review of the measurement process stability 27
11.1 Ongoing review of the stability 27
11.2 Monitoring linearity 28

12 Capability of attribute measurement processes 29
12.1 General 29
12.2 Capability calculations without using reference values 29
12.3 Capability calculations using reference values 30
12.4 Ongoing review 34

Annex A (informative) Examples 35

Annex B (informative) Statistical methods used 41
