ISO 11365:2025-05 (E)

Petroleum and related products - Maintenance and use of triaryl phosphate ester turbine control fluids - Guidance and requirements

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 2

4 Description of triaryl phosphate ester fluids 2

5 Health and safety precautions 3
5.1 Fluid handling 3
5.2 Waste disposal 3

6 Fire hazards 3
6.1 General points 3
6.2 Methods of extinguishing fires 4

7 Compatibility of materials 4
7.1 Seals, paints and gaskets 4
7.2 Electrical cable insulation 4

8 Factors affecting service life 5
8.1 General 5
8.2 System design 5
8.3 System operating conditions 5
8.4 System maintenance 5
8.5 Fluid contamination 6
8.5.1 General 6
8.5.2 Air 6
8.5.3 Water 6
8.5.4 Particulates 6
8.5.5 Mineral oil 6
8.5.6 Metal soaps 6
8.5.7 Chlorinated materials 7
8.6 Fluid condition monitoring 7
8.7 Fluid purification 7
8.8 Fluid top up 7

9 Delivery and storage 7

10 Flushing the system 8

11 Fluid sampling 8
11.1 General 8
11.2 Containers 8
11.3 Sampling in service 9
11.3.1 General 9
11.3.2 Sampling points 9

11.3.3 Precautions when sampling from a line 9
11.3.4 Sampling from a tank or reservoir 9
11.4 Labelling 10
12 Recommended procedures for fluid monitoring 10
12.1 Appearance and colour 10
12.2 Water content 11
12.3 Neutralization number (acid number) 12
12.4 Fluid cleanliness 12
12.5 Direct current resistivity (volume resistivity) 13
12.6 Chlorine content 13
12.7 Mineral oil content 14

12.8 Viscosity 14
12.9 Air release 15
12.10 Foaming 15
12.11 Membrane patch colorimetry 15
12.12 Metals content 15
12.13 Linear sweep voltammetry 16
12.14 Manifold ignition temperature 16

13 Examination of new fluid 16
13.1 General 16
13.2 Acceptance tests for new fluid 17
13.3 Acceptance requirements after installation of a new fluid charge 17

14 Examination of used fluid 18
14.1 General 18
14.2 Trend analysis 19
