European foreword 4

Introduction 5

1 Scope 6

2 Normative references 7

3 Terms and definitions 7

4 Deviations from requirements 9

5 Proof of the endurable longitudinal compressive force 9
5.1 Assessment of endurable longitudinal compressive force 9
5.2 Required endurable longitudinal compressive force for use in conventional trains 9
5.3 Assessment of endurable longitudinal compressive force for use in high-capacity trains 10
5.4 Assessment of endurable longitudinal compressive force for vehicles equipped with centre couplers 10
5.5 Special vehicle layout 10

Annex A (normative) Symbols 12

Annex B (normative) Conditions for the execution and evaluation of propelling tests for the determination of the endurable longitudinal compressive force of vehicles with side buffers 13

B.1 Test track 13
B.2 Test train 13
B.3 Execution of the tests 15
B.4 Measured values 16
B.5 Used criteria for the evaluation of the endurable longitudinal compressive force 17
B.6 Analysis 17
B.7 Documentation of results 18

Annex C (informative) Vehicles incorporated in conventional trains: Conditions for dispensation from the assessment of running safety under longitudinal compressive force 20

C.1 General 20
C.2 2-axle wagons 20
C.3 Wagons with two 2-axle bogies 22
C.4 Wagons with 3-axle bogies 25
C.5 Railbound construction and maintenance machines 26

Annex D (informative) Conventional trains: Design characteristics of standardized interfaces of permanent coupled units for dispensation from the assessment of running safety under longitudinal compressive force - Specification of interface with diagonal buffers 28

Annex E (informative) Requirements for the use of simulations as proof for endurable longitudinal compressive force 29

E.1 Introduction 29
E.2 State of the art for the heavy rail system in ENs related to running dynamics 29
E.3 Modelling for simulations 29
E.4 Validation of the model 31
E.5 Performance of simulations 32

Annex F (informative) Scenarios for the assessment of endurable longitudinal compressive force of a vehicle incorporated in a high-capacity train 33

Annex G (informative) Vehicle incorporated in a high-capacity trains: conditions for dispensation from the assessment of running safety under longitudinal compressive force 35

G.1 Introduction 35
G.2 Wagons with 2 bogies 35
G.3 Articulated wagons with 3 bogies 36

Annex H (informative) Vehicles with centre couplers 37
