ISO 14571:2020 (E)

Metallic coatings on non-metallic basis materials — Measurement of coating thickness — Micro-resistivity method

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

4 Measurement principle

5 Factors affecting measurement uncertainty

- 5.1 Range of measurement
- 5.2 Coating resistivity
- 5.3 Width of the sample
- 5.4 Curvature
- 5.5 Surface roughness
- 5.6 Temperature
- 5.7 Probe contact pressure

6 Calibration of instruments

- 6.1 General
- 6.2 Calibration standards
- 6.3 Verification

7 Procedure

- 7.1 General
- 7.2 Width of the sample
- 7.3 Curvature
- 7.4 Number of measurements
- 7.5 Surface cleanliness

8 Accuracy requirements

9 Test report

Annex A (informative) Method for determining the critical current path width

- A.1 General
- A.2 Sample preparation
- A.3 Measurement
