

ISO/IEC 30100-3:2016-04 (E)

Information technology - Home network resource management - Part 3: Management application

CONTENTS

- FOREWORD.....4
- INTRODUCTION.....5
- 1 Scope.....6
- 2 Normative references.....6
- 3 Terms, definitions and abbreviations6
 - 3.1 Terms and definitions6
 - 3.2 Abbreviations8
- 4 Conformance9
- 5 Management application9
 - 5.1 Overview.....9
 - 5.2 Management application model9
 - 5.3 Home resource management process10
 - 5.4 Simple interaction flow using HRMI.....10
- 6 Home resource management interface (HRMI)12
 - 6.1 Overview.....12
 - 6.2 List of resource management interface services.....13
 - 6.3 Home resource management interface services14
 - 6.3.1 Request for user authentication14
 - 6.3.2 Request for initial setup.....14
 - 6.3.3 Request for operation start15
 - 6.3.4 Request for operation stop15
 - 6.3.5 Request for operation restart16
 - 6.3.6 Request for the inquiry of home resource domain.....16
 - 6.3.7 Request for the inquiry of home resource information.....17
 - 6.3.8 Request for the inquiry of home resource information by Name18
 - 6.3.9 Request for the inquiry of home resource information by type.....19
 - 6.3.10 Request for the inquiry of home resource information by ID.....19
 - 6.3.11 Request for the inquiry of home relation information.....20
 - 6.3.12 Request for the inquiry of home relation information by domain21
 - 6.3.13 Request for the inquiry of home relation information by relation ID22
 - 6.3.14 Request for the inquiry of home relation information by source ID.....22
 - 6.3.15 Request for registration of event condition23
 - 6.3.16 Request for cancellation of event condition24
 - 6.3.17 Request for inquiry of event.....24
 - 6.3.18 Request for resource control.....25
 - 6.3.19 Request for resource probing26
 - 6.3.20 Request for log data about relation information26
 - 6.4 Management interface services28
 - 6.4.1 Data structure of management interface.....28
 - 6.4.2 Event Name of management interface29

Annex A (informative) Interface schema for physical space information provider (example)	30
Annex B (informative) Implementation of management application (example)	34
B.1 Overview.....	34
B.2 Fault management application overview.....	34
B.3 Simple fault diagnosis scenario using HRMI.....	35
B.3.1 Initial setup	35
B.3.2 Resource and relation object information acquisition	36
B.3.3 Fault diagnosis.....	37
B.3.4 Event processing.....	37
B.3.5 Fault diagnosis result notify	38
