DIN 25483:2023-07 (E)

Methods of environmental monitoring using integrating solid-state dosimeters

Contents

Page

Foreword 6

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions 9

4 Symbols 12

5 Requirements on the dosimetry system 16
5.1 General 16
5.2 Rated range of use 17
5.3 Influence quantities 17
5.4 Design, enclosure and marking of dosemeters 17
5.5 Calibration 18
5.6 Documentation 18

6 Process requirements and specifications 19
6.1 Distribution of tasks between evaluation facility and monitoring body 19
6.2 Requirements for measurement sites 20
6.2.1 Number and spatial distribution of measurement sites and dosemeters 20
6.2.2 Site conditions and deployment of dosemeters 20
6.3 Monitoring period tü 21
6.4 Limiting the handling period tH 22
6.5 Detection of and correction for extraneous radiation during the handling period 22

7 Determining the dose 23
7.1 Determining the dose indication G 23
7.2 Determination of the area dose 24
7.3 Determination of correction factors 25
7.3.1 Climate and long-term correction factor 25
7.3.2 Correction factor for the influence quantity photon energy and radiation incidence direction 26
7.3.3 Correction factor for linearity deviation 26
7.4 Determination of the handling dose HH 26
7.5 Determination of the additional dose 27

8 Measurement uncertainty and characteristic limits 27
8.1 Propagation of measurement uncertainties 27
8.2 Measurement uncertainty of the area dose 27
8.3 Measurement uncertainties of the input quantities of the area dose 28
8.3.1 General procedure 28
8.3.2 Estimate and measurement uncertainty of the dose indication Gj 28
8.3.3 Estimate and measurement uncertainty of the climate and long-term correction for preliminary evaluation 29
8.4 Measurement uncertainty of the additional dose 29
8.5 Calculation of the standard uncertainty as a function of the assumed true value of the additional dose 29
8.6 Decision threshold and detection limit of the additional dose 30

8.7 Coverage interval for the additional dose 30
8.8 Best estimate and its associated standard uncertainty of the additional dose 30

9 Sequence of the measurement procedure 31
9.1 Preparing a dosemeter group 31
9.2 Steps at the evaluation facility 31
9.2.1 Preparation of the monitoring period 31
9.2.2 Follow-up of the monitoring period 32
9.3 Steps at the monitoring body 32
9.3.1 Start of the monitoring period 32
9.3.2 End of the monitoring period 32
9.4 Calculation of area doses 32
9.5 Documentation, interpretation and reporting of the monitoring results 33

10 Quality assurance 34
10.1 General 34
10.2 Calibration checks 34
10.3 Participation in comparison programmes 34

Annex A (informative) Information on dose determination in case of incidents and emergency situations 36

A.1 Requirements 36
A.2 Changing dosemeters 36
A.3 Calibration and evaluation 36

Annex B (informative) Information on the determination of the background dose 38

B.1 General 38
B.2 Determination of interval-specific components 39
B.2.1 Background dosemeters at a reference site 39
B.2.2 Statistical evaluation of all area dose measured values within a monitoring interval 40
B.3 Determination of site-specific components 40
B.3.1 Statistical evaluation of unaffected area dose measured values 40
B.3.2 Determination without unaffected monitoring intervals 43
B.3.3 Blanket determination 43
B.4 Use of additional measurement methods 44

Annex C (informative) Example of the determination of the additional dose, its measurement uncertainty and characteristic limits (analytical method) 45

C.1 General 45
C.2 Example data 45
C.3 Input quantities 46
C.3.1 Estimate and measurement uncertainty of the correction factors 46
C.3.2 Estimate and measurement uncertainty of the calibration coefficient N 46
C.3.3 Estimate and measurement uncertainty of the dose indications Gj and GU 46
C.3.4 Estimate and measurement uncertainty of the handling period tH 47
C.3.5 Estimate and measurement uncertainty of the natural dose rate nat 47
C.4 Area dose and background dose 47
C.4.1 Determination of the dose values and their uncertainty of measurement 47
C.4.2 Uncertainty budget for the area dose and the background dose 50
C.5 Additional dose 51
C.5.1 Determination of the additional dose and its uncertainty of measurement 51
C.5.2 Uncertainty budget of the additional dose 52
C.5.3 Decision threshold and detection limit of the additional dose 53
C.5.4 Calculation of the decision threshold of the additional dose 54
C.5.5 Calculation of the detection limit of the additional dose 54
C.5.6 Limits of coverage intervals for the additional dose 55
C.5.7 Best estimate of the additional dose and the associated uncertainty 55

Annex D (informative) Example of the determination of the additional dose, its measurement uncertainty and characteristic limits (Monte Carlo method) 57

D.1 General 57
D.2 Comparison of results obtained with the analytical and the Monte Carlo methods: Model functions and numerical examples from Annex C in photon dosimetry 57
D.3 Comparison of results obtained with the analytical and the Monte Carlo methods: Model functions from Annex C in neutron dosimetry 60

Annex E (informative) Environmental dosimetry for neutron radiation with thermoluminescence detectors 65

E.1 General description of method 65
E.2 Example of the determination of the additional dose, its measurement uncertainty and characteristic limits 65
E.2.1 General 65
E.2.2 Input quantities 67
E.2.3 Area dose and background dose 68
E.2.4 Uncertainty budget for the area dose and the background dose 69
E.2.5 Additional dose 70

Annex F (informative) Example of the division of a dosemeter group 74

Bibliography 75

Figures Figure D.1 -- PDF calculated by Monte Carlo method for the area dose Hj (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line) 59

Figure D.2 -- PDF calculated by Monte Carlo method for the background dose HU,j (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line) 59

Figure D.3 -- PDFs calculated using the Monte Carlo method (in grey) for the additional dose Hz,j (top), for an additional dose of zero to determine the decision threshold , (middle), and for the detection limit , # (bottom) - each compared to the corresponding normal distribution according to the analytical method (solid lines) 60

Figure D.4 -- PDF calculated by the Monte Carlo method for the area dose Hj (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line) 62

Figure D.5 -- PDF calculated by the Monte Carlo method for the background dose HU,j (in grey) in comparison with the corresponding normal distribution according to analytical method (solid line) 63

Figure D.6 -- PDFs calculated using the Monte Carlo method (in grey) for the additional dose Hz,j (top), for an additional dose of zero to determine the decision threshold , (middle), and for the detection limit , # (bottom) - each compared to the corresponding normal distribution according to the analytical method (solid lines) 64
