

DIN ISO 20785-2:2016-08 (E)

Dosimetry for exposures to cosmic radiation in civilian aircraft - Part 2: Characterization of instrument response (ISO 20785-2:2011)

Contents	Page
National foreword	3
National Annex NA (informative) Relationship to European and international documents	4
National Annex NB (informative) Bibliography	5
Introduction.....	6
1 Scope	7
2 Normative references.....	7
3 Terms and definitions	8
3.1 General terms	8
3.2 Terms related to quantities and units	13
3.3 Terms related to the atmospheric radiation field	17
4 General considerations.....	18
4.1 The cosmic radiation field in the atmosphere	18
4.2 General considerations for the dosimetry of the cosmic radiation field in aircraft and requirements for the characterization of instrument response	20
4.3 General considerations for measurements at aviation altitudes	21
5 Calibration fields and procedures	22
5.1 General considerations.....	22
5.2 Characterization of an instrument.....	24
5.3 Instrument-related software	27
6 Uncertainties	28
7 Remarks on performance tests.....	28
Annex A (informative) Representative particle fluence energy distributions for the cosmic radiation field at flight altitudes for solar minimum and maximum conditions and for minimum and maximum vertical cut-off rigidity	29
Annex B (informative) Radiation fields recommended for use in calibrations.....	31
Annex C (informative) Comparison measurements	35
Annex D (informative) Charged-particle irradiation facilities	37
Bibliography.....	38
