IEC/TR 62366-2:2016-04 (E)

Medical devices - Part 2: Guidance on the application of usability engineering to medical devices

Contents

Page

FOREWORD....6
INTRODUCTION....8
1 Scope and purpose....9
1.1 Scope....9
1.2 Purpose....9
2 Normative references....10
3 Terms and definitions....11
4 Mapping between the requirements of IEC 62366-1 and the guidance of IEC TR 62366-2....14
5 Background and justification of the USABILITY ENGINEERING program....14
5.1 How SAFETY relates to USABILITY....14
5.2 Reasons to invest in USABILITY ENGINEERING....15
6 How to implement a USABILITY ENGINEERING program....16
6.1 Effective USABILITY ENGINEERING programs....16
6.2 Effective USABILITY ENGINEERING projects and plans....16
6.3 Apply an appropriate level of USABILITY ENGINEERING expertise....17
6.4 Ensure the necessary resources are available and well timed....18
6.5 RISK MANAGEMENT as it relates to USABILITY ENGINEERING....18
6.5.1 RISK ANALYSIS....18
6.5.2 RISK CONTROL....19
6.5.3 Information for SAFETY....20
6.5.4 Overall evaluation of RESIDUAL RISK....22
6.6 USABILITY ENGINEERING FILE....22
6.7 Tailoring the USABILITY ENGINEERING effort....23
7 Overview of the USABILITY ENGINEERING PROCESS....24
8 Prepare the USE SPECIFICATION....27
8.1 Initiate USE SPECIFICATION....27
8.2 Analyse the intended USERS, anticipated USER TASKS and intended USE ENVIRONMENTS....28
8.2.1 Intended USERS....28
8.2.2 Anticipated USER TASKS....30
8.2.3 Intended USE ENVIRONMENT....30
8.3 Finalize the USE SPECIFICATION....30
8.4 Recommended methods for developing the USE SPECIFICATION....31
8.4.1 General....31
8.4.2 Contextual inquiry and observation....31
8.4.3 Interview and survey techniques....31
8.4.4 Expert reviews....32
8.4.5 Advisory panel reviews....32
8.4.6 USABILITY TESTS....32

9 Identify USER INTERFACE characteristics related to SAFETY and potential USE ERRORS 32
9.1 General 32
9.2 TASK ANALYSIS 33
9.3 FUNCTION ANALYSIS 33
9.4 Identify and analyse known problems 35
10 Identify known or foreseeable HAZARDS and HAZARDOUS SITUATIONS 35
11 Identify and describe HAZARD-RELATED USE SCENARIOS 36
11.1 Define USE SCENARIOS 36
11.2 USE SCENARIOS as they relate to RISK MANAGEMENT 36
11.3 Identify HAZARD-RELATED USE SCENARIOS 37
11.4 Methods to define and analyse HAZARD-RELATED USE SCENARIOS 37
12 Select the HAZARD-RELATED USE SCENARIOS for SUMMATIVE EVALUATION 38
12.1 General 38
12.2 Selection of the HAZARD-RELATED USE SCENARIOS based on SEVERITY 39
12.3 Selection of HAZARD-RELATED USE SCENARIOS based on other circumstances 39
13 Establish USER INTERFACE SPECIFICATION 40
13.1 Development of the USER INTERFACE SPECIFICATION 40
13.2 ACCOMPANYING DOCUMENTATION and training 40
14 Establish USER INTERFACE EVALUATION plan 41
14.1 Specify how the USER INTERFACE design will be explored and evaluated 41
14.2 FORMATIVE EVALUATION planning 42
14.3 SUMMATIVE EVALUATION planning 42
14.4 USABILITY TEST planning 43
14.5 Example USABILITY TEST protocol and report 43
15 Design and implement the USER INTERFACE and training 44
15.1 General 44
15.2 Develop conceptual model(s) 46
15.3 Design software USER INTERFACES (if applicable) 47
15.3.1 General 47
15.3.2 Review USER INTERFACE REQUIREMENTS and constraints 47
15.3.3 Develop software USER INTERFACE structure(s) 47
15.3.4 Design wireframes 48
15.3.5 Design screen templates 48
15.4 Design hardware USER INTERFACES (if applicable) 48
15.4.1 General 48
15.4.2 Review USER INTERFACE REQUIREMENTS and constraints 49
15.4.3 Develop concept sketches 49
15.5 Design materials necessary for training and training 49
15.5.1 General 49
15.5.2 Training materials 49
15.5.3 Training 51
15.6 Develop detailed designs 52
15.7 Verify the design of the USER INTERFACE 52

16 Perform FORMATIVE EVALUATIONS 52
16.1 Conduct multiple FORMATIVE EVALUATIONS 52
16.2 Recommended methods for FORMATIVE EVALUATION 53
16.2.1 General 53
16.2.2 Conduct heuristic analysis 54
16.2.3 Conduct cognitive walkthrough 54
16.2.4 Conduct USABILITY TESTS 54
16.3 Analysis of FORMATIVE EVALUATION results 55
17 Perform SUMMATIVE EVALUATION 55
17.1 General 55
17.2 Conduct a SUMMATIVE EVALUATION 56
17.3 Data collection 57
17.3.1 General 57
17.3.2 Observational data 57
17.3.3 Subjective data 58
17.4 Data analysis 59
18 Document the USABILITY ENGINEERING project 61
19 POST-PRODUCTION review and analysis 61
Annex A (informative) Recommended reading list 64
Annex B (informative) External resources to identify known problems 66
B.1 General 66
B.2 Austria 66
B.3 Germany 66
B.4 Sweden 67
B.5 Switzerland 67
B.6 United Kingdom 67
B.7 United States 67
Annex C (informative) Developing USABILITY GOALS for commercial purposes 68
C.1 General 68
C.2 Objective goals 68
C.3 Subjective goals 69
Annex D (informative) USABILITY ENGINEERING project end products 71
Annex E (informative) USABILITY ENGINEERING methods 73
E.1 General 73
E.2 Advisory panel reviews 74
E.3 Brainstorm USE SCENARIOS 75
E.4 Cognitive walkthrough 75
E.5 Contextual inquiry 75
E.6 Day-in-the-life analysis 76
E.7 Expert reviews 77
E.8 FMEA and FTA 77
E.9 Focus groups 78
E.10 FUNCTION ANALYSIS 78
E.11 Heuristic analysis 79
E.12 Observation 79
E.13 One-on-one interviews 79
E.14 Participatory design 80
E.15 PCA analysis 80

E.16 SIMULATION 82
E.17 Standards reviews 82
E.18 Surveys 83
E.19 TASK ANALYSIS 83
E.20 Time-and-motion studies 84
E.21 Workload assessment 84
Annex F (informative) USABILITY ENGINEERING studies in clinical settings 85
F.1 General 85
F.2 Sample study in the clinical environment 85
Annex G (informative) USER PROFILE 87
Annex H (informative) USE ENVIRONMENT descriptions 89
Annex I (informative) USER INTERFACE REQUIREMENTS 91
Annex J (informative) Model the USER INTERFACE 92
J.1 General 92
J.2 Develop preliminary prototype(s) 92
J.3 Develop a refined prototype 92
J.4 Develop a specification prototype 93
J.5 Prepare a style guide 93
Annex K (informative) USABILITY TEST sample size 94
Annex L (informative) Identifying distinct USER groups 97
Bibliography 98
Index of defined terms 101

Figure 1 – Example of a USABILITY ENGINEERING project for a graphical USER INTERFACE 26
Figure 2 – Progression of a USER INTERFACE design from multiple concepts to a few concepts to a preferred concept 46
Figure 3 – Progression of concepts from multiple concepts to a few concepts to a preferred concept 50
Figure E.1 – Sample of a USE ENVIRONMENT within a hospital 76
Figure E.2 – Model of USER-MEDICAL DEVICE interaction 81
Figure E.3 – Infant manikin used in a neonatal care unit simulator (left), test participant simulating an auto-injector (centre) and an adult manikin used in a surgery SIMULATION (right) 82
Figure E.4 – Example hierarchical TASK ANALYSIS 84
Figure J.1 – USER INTERFACE designers using prototyping software to build and test a USER INTERFACE 93
Figure K.1 – Number of test participants needed in a USABILITY TEST for FORMATIVE EVALUATION 95

Table 1 – Mapping between the requirements of IEC 62366-1 and the guidance of IEC TR 62366-2 14
Table 2 – Human versus machine capabilities 34
Table 3 – Example of five qualitative SEVERITY levels (adapted from Table D.3 of ISO 14971:2007) 39

Table 4 – Example outline of a USABILITY TEST protocol 44
Table 5 – Example outline of a USABILITY TEST report 44
Table 6 – USE ERRORS caused by sample USER INTERFACE design shortcomings 55
Table 7 – Sample USE ERRORS and their root causes 60
Table D.1 – USABILITY ENGINEERING project end products 71
Table E.1 – Recommended application of USABILITY methods 74
Table G.1 – Sample USER PROFILE 87
Table H.1 – Sample USE ENVIRONMENT 89
Table I.1 – Sample USER INTERFACE REQUIREMENTS 91
Table K.1 – Cumulative probability of detecting a USABILITY problem 96
