ISO 16639:2017-01 (E)

Surveillance of the activity concentrations of airborne radioactive substances in the workplace of nuclear facilities

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 2

3 Termsanddefinitions 2

4 Symbols 5

5 Developing the surveillance program 5
5.1 Reasons for conducting a surveillance programme 5
5.1.1 General 5
5.1.2 Sampling when respiratory protective equipment is used 6
5.1.3 Sampling to establish air contamination areas 6
5.1.4 Air sampling as a basis for determining worker intakes 6
5.1.5 Air monitoring for early warning of elevated air concentrations 6
5.2 Graded approach to sampling 7
5.3 Frequency of sampling 8
5.3.1 General 8
5.3.2 Grab vs. continuous sampling 8
5.3.3 Continuous monitoring of activity concentrations 8
5.3.4 Prompt analysis of certain samples 9
5.4 Substitutes for air sampling 9

6 Location of samplers and monitors 9
6.1 General 9
6.2 Types of air flow studies 9
6.2.1 General 9
6.2.2 Qualitative airflow studies 9
6.2.3 Quantitative airflow studies 10
6.3 Location of samplers for estimating committed effective dose 10
6.4 Location of samplers for evaluating effectiveness of containment 11
6.5 Location of samplers for posting of air contamination areas 11
6.6 Location of portable samplers 12
6.7 Location of CAM for continuous monitoring of the activity concentration 12

7 Collection of samples 12
7.1 General 12
7.2 Sampling of aerosol particles 12
7.3 Gas Sampling 13

8 Evaluation of sampling results 14
8.1 Determining the average activity concentration 14
8.2 Uncertainty 14
8.3 Techniques for correcting for radon progeny interference 15
8.4 Evaluating changes in activity concentration over time 15
8.5 Review of sampling results 15

9 Evaluating the effectiveness of the sampling program 16
9.1 General 16
9.2 Dose-based assessment of the adequacy of the sampling program 16

10 Quality assurance and quality control 17
10.1 General 17
10.2 Sample identification, handling, and storage 17
10.3 Sampling and monitoring equipment 17
10.3.1 General 17
10.3.2 Performance of measuring instruments 18
10.3.3 Air in-leakage testing 18
10.4 Documentation and record keeping 18

Annex A (informative) Examples for the determination of uncertainty, decision threshold and detection limit according to ISO 11929 20

Annex B (informative) Correcting for the interference of radon progeny 27

Annex C (informative) Normalized concentration and exposure 29

Annex D (informative) Example applications of evaluating sampling program sensitivity from the viewpoint of potential missed exposure 30
