DIN SPEC 91526:2025-05 (E)

Knowledge Graphs for Language Models and Language Models for Knowledge Graphs - Hybrid Applications of symbolic and subsymbolic AI; Text in English

Inhalt

Seite

Foreword 4

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions 8

4 Selected Solutions and Applications 19
4.1 Question Answering 19
4.1.1 Description 19
4.1.2 The Need for LLM+KG Integration 20
4.1.3 Implementation Strategies 20
4.1.4 Selected Use Cases 20
4.1.5 References 21
4.2 Fact-Checking 21
4.2.1 Description 21
4.2.2 The Need for LLM+KG Integration 21
4.2.3 Implementation Strategies 22
4.2.4 Selected Use Cases 22
4.2.5 References 22
4.3 Multilingual Knowledge Graphs 22
4.3.1 Description 22
4.3.2 The Need for Multilingual, Linguistically Rich Knowledge Graphs 23
4.3.3 Implementation Strategies 23
4.3.4 Selected Use Cases 23
4.3.5 References 24

5 How do I enhance Large Language Models (LLMs) by using Knowledge Graphs (KGs)? 24
5.1 How do I enhance, augment, extend LLM training through KGs? 24
5.1.1 Problem statement 24
5.1.2 Explanation of concepts 24
5.1.3 State-of-the-art 25
5.1.4 Answer 1: Integrate KGs into LLMs by verbalising and including them in LLM pre-training data 26
5.1.5 Answer 2: Integrate KGs into LLMs during pre-training by adapting the transformer architecture 27
5.1.6 Answer 3: Integrate KGs into LLMs during fine-tuning 28
5.1.7 References 29
5.2 How do I use KGs for Retrieval-Augmented Generation (RAG)? 30
5.2.1 Problem statement 30
5.2.2 Explanation of concepts 30
5.2.3 State-of-the-art 31
5.2.4 Answer 1: Knowledge Graph as a Database with Natural Language Queries (NLQ) 31
5.2.5 Answer 2: Knowledge Graph-Guided Retrieval Mechanisms 32
5.2.6 Answer 3: Hybrid RAG Combining Knowledge Graphs and Dense Vectors 33
5.2.7 References 34
5.3 How do I enhance LLM explainability by using KGs? 34
5.3.1 Problem Statement 34

5.3.2 Explanation of concepts 35
5.3.3 State of the art 36
5.3.4 Answer 1: Measuring KG Alignment in LLM Representations 36
5.3.5 Answer 2: KG-Guided Explanation Generation 37
5.3.6 Answer 3: KG-Based Fact-Checking and Verification 38
5.3.7 References 39
5.4 How do I enhance LLM reasoning through KGs? 40
5.4.1 Problem Statement 40
5.4.2 Explanation of concepts 41
5.4.3 Brief description of the state of the art 41
5.4.4 Answer 1: KG-Guided Multi-hop Reasoning 42
5.4.5 Answer 2: KG-Based Consistency Checking in LLM Outputs 43
5.4.6 References 43
5.5 How do I evaluate LLMs through KGs? 44
5.5.1 Problem statement 44
5.5.2 Explanation of concepts 45
5.5.3 State of the art 45
5.5.4 Answer 1: Using KGs to Evaluate the Knowledge Represented in an LLM 45
5.5.5 Answer 2: Using KGs to Evaluate LLM Factuality 46
5.5.6 Answer 3: Analysing LLM Biases through KG Comparisons 47
5.5.7 References 48

6 How do I enhance Knowledge Graphs (KGs) by Using Large Language Models (LLMs)? 49
6.1 How do I construct the underlying ontology of a KG with the help of an LLM? 49
6.1.1 Problem statement 49
6.1.2 Step 1: Ontology Design – User Story Generation 50
6.1.3 Step 2: Competency Question (CQ) Generation 50
6.1.4 Step 3: Ontology Evaluation 50
6.1.5 Step 4: Ontology Learning 51
6.1.6 Step 5: Ontology Mapping 51
6.1.7 Step 6: Ontology Documentation 52
6.1.8 References 52
6.2 How do I fill and instantiate a KG with knowledge contained in text documents? 54
6.2.1 Problem statement 54
6.2.2 Explanation of concepts 54
6.2.3 State-of-the-art 54
6.2.4 Step 1: Extraction of Entities from Text and Linking Entities to Knowledge Graph Instances 55
6.2.5 Step 2: Extraction, Completion or Testing of A-Box Statements defining characteristics and relations of entities 55
6.2.6 References 56

Bibliography 59
