

# ISO 16639:2017-01 (E)

## Surveillance of the activity concentrations of airborne radioactive substances in the workplace of nuclear facilities

---

<b>Contents</b>		<b>Page</b>
Foreword .....		v
Introduction .....		vi
1	Scope .....	1
2	Normative references .....	2
3	Terms and definitions .....	2
4	Symbols .....	5
5	Developing the surveillance program .....	5
5.1	Reasons for conducting a surveillance programme .....	5
5.1.1	General .....	5
5.1.2	Sampling when respiratory protective equipment is used .....	6
5.1.3	Sampling to establish air contamination areas .....	6
5.1.4	Air sampling as a basis for determining worker intakes .....	6
5.1.5	Air monitoring for early warning of elevated air concentrations .....	6
5.2	Graded approach to sampling .....	7
5.3	Frequency of sampling .....	8
5.3.1	General .....	8
5.3.2	Grab vs. continuous sampling .....	8
5.3.3	Continuous monitoring of activity concentrations .....	8
5.3.4	Prompt analysis of certain samples .....	9
5.4	Substitutes for air sampling .....	9
6	Location of samplers and monitors .....	9
6.1	General .....	9
6.2	Types of air flow studies .....	9
6.2.1	General .....	9
6.2.2	Qualitative airflow studies .....	9
6.2.3	Quantitative airflow studies .....	10
6.3	Location of samplers for estimating committed effective dose .....	10
6.4	Location of samplers for evaluating effectiveness of containment .....	11
6.5	Location of samplers for posting of air contamination areas .....	11
6.6	Location of portable samplers .....	12
6.7	Location of CAM for continuous monitoring of the activity concentration .....	12
7	Collection of samples .....	12
7.1	General .....	12
7.2	Sampling of aerosol particles .....	12
7.3	Gas Sampling .....	13
8	Evaluation of sampling results .....	14
8.1	Determining the average activity concentration .....	14
8.2	Uncertainty .....	14
8.3	Techniques for correcting for radon progeny interference .....	15
8.4	Evaluating changes in activity concentration over time .....	15
8.5	Review of sampling results .....	15

<b>9</b>	<b>Evaluating the effectiveness of the sampling program .....</b>	<b>16</b>
<b>9.1</b>	<b>General .....</b>	<b>16</b>
<b>9.2</b>	<b>Dose-based assessment of the adequacy of the sampling program .....</b>	<b>16</b>
<b>10</b>	<b>Quality assurance and quality control .....</b>	<b>17</b>
<b>10.1</b>	<b>General .....</b>	<b>17</b>
<b>10.2</b>	<b>Sample identification, handling, and storage .....</b>	<b>17</b>
<b>10.3</b>	<b>Sampling and monitoring equipment .....</b>	<b>17</b>
<b>10.3.1</b>	<b>General .....</b>	<b>17</b>
<b>10.3.2</b>	<b>Performance of measuring instruments .....</b>	<b>18</b>
<b>10.3.3</b>	<b>Air in-leakage testing .....</b>	<b>18</b>
<b>10.4</b>	<b>Documentation and record keeping .....</b>	<b>18</b>
<b>Annex A (informative)</b>	<b>Examples for the determination of uncertainty, decision threshold and detection limit according to ISO 11929 .....</b>	<b>20</b>
<b>Annex B (informative)</b>	<b>Correcting for the interference of radon progeny .....</b>	<b>27</b>
<b>Annex C (informative)</b>	<b>Normalized concentration and exposure .....</b>	<b>29</b>
<b>Annex D (informative)</b>	<b>Example applications of evaluating sampling program sensitivity from the viewpoint of potential missed exposure .....</b>	<b>30</b>
<b>Bibliography</b>	<b>.....</b>	<b>32</b>
