ISO/IEC 14165-151:2017-12 (E)

Information technology - Fibre channel - Part 151: Fibre Channel BaseT (FC-BaseT)

Contents **Page**

FOREWORD . . . 7
INTRODUCTION . . . 9

1 Scope . . . 10

2 Normative references . . . 10

3 Terms, definitions, abbreviations, symbols, and conventions . . . 11
3.1 Terms and definitions . . . 11
3.2 Editorial conventions . . . 14
3.3 Abbreviations, acronyms, and symbols . . . 14
3.4 Keywords . . . 15
3.5 State Diagram notation . . . 16
3.5.1 State Diagram conventions . . . 16
3.5.2 State Diagram variables . . . 17
3.5.3 State Diagram timers . . . 17
3.5.4 State transitions . . . 17
3.5.5 Operators . . . 18

4 Structure and concepts . . . 19
4.1 Overview . . . 19
4.2 Relationship with other standards . . . 20
4.3 FC-BaseT PHY logical model . . . 21
4.4 FC-BaseT usage of XGMII . . . 22
4.5 Operation of FC-BaseT . . . 23
4.5.1 Overview . . . 23
4.5.2 PCS overview . . . 24
4.5.3 PMA overview . . . 25
4.6 FC-BaseT service primitives and interfaces . . . 25
4.6.1 Overview . . . 25
4.6.2 PMA service interface . . . 25
4.6.3 Management function interface . . . 30
4.7 FC-BaseT Nomenclature . . . 31

5 Physical Coding Sublayer (PCS) . . . 32
5.1 Overview . . . 32
5.2 PCS reset function . . . 32
5.3 PCS transmit function . . . 33
5.3.1 Overview . . . 33
5.3.2 36/33 transcoding . . . 34
5.3.3 Error detecting code . . . 36
5.3.4 PCS scrambling . . . 37
5.3.5 Schläfli Lattice coding . . . 39
5.3.6 Trellis coding . . . 40
5.3.7 Generation of PMA training sequences . . . 41
5.4 PCS receive function . . . 42
5.4.1 Overview . . . 42
5.4.2 Decoding . . . 43
5.4.3 PCS descrambling . . . 44
5.4.4 33/36 transcoding . . . 45
5.4.5 PCS synchronization . . . 46
5.5 State Diagrams . . . 46

6 PMA Sublayer and Medium Dependent Interface 48
6.1 PMA Overview 48
6.2 PMA Functions 49
6.2.1 PMA Reset function 49
6.2.2 PMA Transmit function 49
6.2.3 PMA Receive Function 49
6.2.4 PHY Control Function 50
6.2.5 Link Monitor Function 53
6.2.6 Clock Recovery Function 53
6.2.7 State Diagrams 53
6.3 PMA Electrical Specification 56
6.3.1 Isolation and EMC Requirements 56
6.3.2 Test Modes 56
6.3.3 Transmitter Electrical Specifications 59
6.3.4 Receiver Electrical Specifications 64
6.4 MDI Specification 66
6.4.1 Overview 66
6.4.2 MDI Mechanical Specification 66
6.4.3 Automatic MDI/MDI-X Configuration 67
6.4.4 MDI Electrical Specification 67
6.4.5 MDI Fault tolerance 67
6.5 Link Segment Characteristics 67
6.5.1 Overview 67
6.5.2 FC-BaseT Link Topology 68
6.5.3 FC-BaseT Cable Plant Requirements 68

7 Elasticity FIFO 69
7.1 Overview 69
7.2 Ordered sets processing 70
7.3 Clock skew compensation 71

8 PHY startup procedure 73
8.1 Overview 73
8.2 Host speeds determination 73
8.3 Host synchronization 73
8.4 FC-BaseT auto-negotiation 74
8.4.1 Overview 74
8.4.2 FC-BaseT support 75
8.4.3 Master-Slave relationship 76
8.4.4 Cable length estimation 77
8.4.5 Tentative Operating Speed Determination 78
8.4.6 Configuration resolution 79
8.5 Speed downshift function 80
8.6 State diagrams 80

9 Port management 86
9.1 Overview 86
9.2 FC-BaseT management registers 86
9.3 Control Register 88
9.4 Status Register 91
9.5 Speed Downshift Register 93
9.6 Test Register 94
9.7 SNR Margin Registers 94
9.8 Auto-Negotiation Pages Registers 95

Annex A (informative) Additional 36/33 Mappings 98
A.1 Overview. 98
A.2 Notation 98
A.3 Additional mappings 98

Annex B (informative) Schläfli Lattice coding 100

Annex C (informative) Recommended 4GFC-BaseT power schedule 102

Bibliography 103
