## ISO 11929-1:2019 (E)

Determination of the characteristic limits (decision threshold, detection limit and limits of the coverage interval) for measurements of ionizing radiation — Fundamentals and application — Part 1: Elementary applications

## Contents

Foreword

Introduction

- 1 Scope
- 2 Normative references
- 3 Terms and definitions
- 4 Quantities and symbols
- 5 Summary of procedures for evaluating a measurement and calculating the characteristic limits
  - 5.1 General aspects
  - 5.2 Modelling the measurement
  - 5.3 General considerations about the applicability of the ISO/IEC Guide 98-3
  - 5.4 Evaluating the input quantities, standard uncertainties and covariances, and the primary result and its associated standard uncertainty
  - 5.5 Evaluating the standard uncertainty as a function of an assumed true value of the measurand
  - 5.6 Calculating the decision threshold and decisions to be made
  - 5.7 Calculating the detection limit and assessment of the measurement procedure
  - 5.8 Calculating a coverage interval for the measurand
  - 5.9 Calculating the best estimate of the measurand and its associated standard uncertainty
  - 5.10 Reporting the results
- 6 Fundamentals and evaluation of the measurement
  - 6.1 General aspects concerning the measurand
  - 6.2 Model of evaluation
  - 6.2.1 General model
  - 6.2.2 Model in ionizing radiation counting measurements
  - 6.3 Evaluation of the primary measurement result
  - 6.4 Standard uncertainty associated with the primary measurement result
  - Standard uncertainty as a function of an assumed value of the measurand
- 8 Decision threshold, detection limit and assessments
  - 8.1 Specifications

7

- 8.2 Decision threshold
- 8.3 Detection limit
- 8.4 Assessments
- 9 Limits of the coverage interval
  - 9.1 General aspects
  - 9.2 The probabilistically symmetric coverage interval
  - 9.3 The shortest coverage interval
- 10 The best estimate and its associated standard uncertainty
- 11 Documentation

Annex A (normative) Repeated counting measurements with random influences

- A.1 General aspects
- A.2 Procedure with unknown influences
- A.3 Procedure with known influences
- A.4 Black-box measurements with random influences
- Annex B (normative) Measurements with ratemeters
- Annex C (informative) Calculation of the detection limit by iteration

Annex D (informative) Calculations with a generalized net count rate

- D.1 Model of evaluation with a generalized net count rate
- D.2 Primary measurement result and its associated standard uncertainty
- D.3 Standard uncertainty as a function of an assumed true value of the measurand
- D.4 Decision threshold and detection limit
- Annex E (informative) Distribution function of the standardized normal distribution
