ISO 20043-1:2021 (E)

Measurement of radioactivity in the environment — Guidelines for effective dose assessment using environmental monitoring data — Part 1: Planned and existing exposure situation

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols

5 Principle

6 Assessing and monitoring human exposure

7 Environmental monitoring program

- 7.1 General
- 7.2 Planning process
- 7.2.1 Selection of the sampling strategy
- 7.2.2 Description of the sampling plan
- 7.3 Sampling process
- 7.3.1 Collection of samples
- 7.3.2 Preparation of the sorted sample
- 7.4 Laboratory process
- 7.4.1 Handling of the laboratory sample
- 7.4.2 Preparation of the test sample

8 Environmental monitoring to assess external exposure

- 8.1 General
- 8.2 Direct measurement of the external dose
- 8.3 Indirect assessment of the external dose
- 8.3.1 External exposure from contaminated soil
- 8.3.2 External exposure from contaminated air

9 Environmental monitoring to assess internal exposure

- 9.1 General
- 9.2 Inhalation
- 9.3 Ingestion
- 9.3.1 General
- 9.3.2 Ingestion of water
- 9.3.3 Ingestion of agricultural products

10 Radioactivity measurement

- 10.1 General
- 10.2 Soil
- 10.3 Water
- 10.4 Food stuffs

11 Variability and uncertainty

12 Quality assurance and quality control program

Annex A **(informative) Example of sampling procedures for environmental and food matrices**

Annex B **(informative) Example of sample preparation methods for environmental and food matrices**

Annex C **(informative) Investigation to identify the cause of increase of ambient dose and activity concentration of environmental samples above their background levels**
