Nuclear energy - Reference beta-particle radiation - Part 2: Calibration fundamentals related to basic quantities characterizing the radiation field

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Symbols and abbreviated terms and reference and standard test conditions	3
5	Calibration and traceability of reference radiation fields	6
6	General principles for calibration of radionuclide betaparticle fields	6
6.1	General	6
6.2	Scaling to derive equivalent thicknesses of various materials	7
6.3	Characterization of the radiation field in terms of penetrability	8
7	Calibration procedures using an extrapolation chamber	8
7.1	General	8
7.2	Determination of the reference beta-particle absorbed-dose rate	9
8	Calibration with ionization chambers	10
9	Measurements at non-perpendicular incidence	10
10	Uncertainties	10
Annex A (normative) Reference conditions and standard test conditions		18
Annex B (informative) Extrapolation chamber measurements		20
Annex C (normative) Extrapolation chamber measurement correction factors		24
Annex D (informative) Example of an uncertainty analysis		35
Bibliography		39
