ISO 6980-2:2023-11 (E)

Nuclear energy - Reference beta-particle radiation - Part 2: Calibration fundamentals related to basic quantities characterizing the radiation field

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols and abbreviated terms and reference and standard test conditions 3

5 Calibration and traceability of reference radiation fields 6

6 General principles for calibration of betaparticle radiation fields 6
6.1 General 6
6.2 Scaling to derive equivalent thicknesses of various materials 7
6.3 Characterization of the radiation field in terms of penetrability 8

7 Calibration procedures using an extrapolation chamber 8
7.1 General 8
7.2 Determination of the reference beta-particle absorbed-dose rate 9

8 Calibration with ionization chambers 10

9 Measurements at non-perpendicular incidence 10

10 Uncertainties 10

Annex A (normative) Reference conditions and standard test conditions 19

Annex B (informative) Extrapolation chamber measurements 21

Annex C (informative) Extrapolation chamber measurement correction factors 25

Annex D (informative) Example of an uncertainty analysis 37
