Nuclear energy - Reference beta-particle radiation - Part 2: Calibration fundamentals related to basic quantities characterizing the radiation field

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and abbreviated terms and reference and standard test conditions	3
5 Calibration and traceability of reference radiation fields	6
6 General principles for calibration of betaprime radiation fields	6
6.1 General	6
6.2 Scaling to derive equivalent thicknesses of various materials	7
6.3 Characterization of the radiation field in terms of penetrability	8
7 Calibration procedures using an extrapolation chamber	8
7.1 General	8
7.2 Determination of the reference beta-particle absorbed-dose rate	9
8 Calibration with ionization chambers	10
9 Measurements at non-perpendicular incidence	10
10 Uncertainties	10
Annex A (normative) Reference conditions and standard test conditions	19
Annex B (informative) Extrapolation chamber measurements	21
Annex C (informative) Extrapolation chamber measurement correction factors	25
Annex D (informative) Example of an uncertainty analysis	37
Bibliography	41
