ISO 14404-4:2020 (E)

Calculation method of carbon dioxide emission intensity from iron and steel production — Part 4: Guidance for using the ISO 14404 series

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

- 3.1 Emissions
- 3.2 Gas fuel
- 3.3 Liquid fuel
- 3.4 Solid fuel
- 3.5 Auxiliary material
- 3.6 Energy carriers
- 3.7 Ferrous containing materials
- 3.8 Alloys
- 3.9 Product and by-product
- 3.10 Others

4 Symbols

5 Principles

- 5.1 General
- 5.2 Relevance
- 5.3 Completeness
- 5.4 Consistency
- 5.5 Accuracy
- 5.6 Transparency

6 Characteristic features of the ISO 14404 series

7 Guidance for applying the ISO 14404 series to all types of steel plants

- 7.1 General
- 7.2 Application of the ISO 14404 series for steel plants not covered in ISO 14404-1, ISO 14404-2 and ISO 14404-3
- 7.2.1 Steel Plants with iron making processes other than BF and on-site production of DRI
- 7.2.2 Steel Plants with multiple process routes
- 7.2.3 Steel plants which purchase pig iron from outside
- 7.2.4 Steel plants which purchase all or part of semi-finished steel product from outside
- 7.2.4.1 Case-1: a steel plant which produces all steel products are made by using from purchased semi- finished steel product (Re-Roller)
- 7.2.4.2 Case-2: a steel plant which produces crude steel through process routes such as BF-BOF and scrap-EAF in addition to using purchased semi-finished steel products
- 7.3 Guideline for making comparisons using the ISO 14404 series

8 Calculation using the Universal Calculation Sheet

- 8.1 General
- 8.2 Calculation procedure
- 8.2.1 Data collection of crude steel production (or final steel production)
- 8.2.2 Data collection of direct and/or upstream CO2 emission sources
- 8.2.3 Data collection of credit CO2 emissions sources
- 8.2.4 Calculation

9 Additional guidance to the entire ISO 14404 series

9.1 Evaluation of slag
9.2 Explanation of emission factors for by-product gases
9.2.1 General
9.2.2 Explanation of emission factors based on world average electricity equivalent
9.2.3 Explanation of emission factors based on natural gas equivalent
9.2.4 Evaluation of stock
9.3 Selection of calorific values and emission factors for electricity and fuel

Annex A (informative) Calculation of energy consumption and intensity

Annex B (informative) Application of the ISO 14404 series

Annex C (informative) Universal Calculation Sheet

Annex D (informative) Example of template for using different emission factors or emission sources from Table 7

Annex E (Informative) Boundary calculation for a steel plant which produces crude steel and uses purchased semi-finished steel products
