DIN EN 10373:2021-09 (E)

Determination of the physical and mechanical properties of steels using models

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Requirements on the application of models 6
4.1 General 6
4.2 Application range 7
4.3 Requirements on input data 8
4.4 Requirements on output data 8

5 Requirements on model verification and application 8
5.1 General 8
5.2 Model verification 10
5.3 Modelling process validation 10
5.4 Details of the assessment procedure for model verification 10

6 Requirements on monitoring of models 11
6.1 General 11
6.2 Monitoring of models 11
6.3 Deviation of output data from conventional testing 12
6.4 Statistical methods for control and monitoring of models 13

7 Specific requirements on quality management 13
7.1 General 13
7.2 Responsibilities and qualification of employees 13
7.3 Measuring and testing equipment 13
7.4 Handling of data 14
7.5 Documentation 14
7.6 Case of dispute 14

Annex A (informative) Example of a model for calculation of tensile strength in rolling direction 15

Annex B (informative) Illustration of model verification 16

Annex C (informative) Example of a template for predicted properties 18
