

ISO/TR 25088:2026-01 (E)

Guidance for the application of low-carbon technologies in steel plants

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Technology classification	1
4.1	Overview	1
4.2	Breakthrough in smelting process	2
4.3	Process optimization and innovation	2
4.4	Resources recycling	3
4.5	CO₂ capture and utilization (CCU)	3
5	Technical properties	3
5.1	Overview of the technical properties	3
5.2	Smelting process breakthroughs	5
5.2.1	Hydrocarbon coupling enhanced blast furnace technology	5
5.2.2	Hydrogen-based direct reduction technology	6
5.2.3	Low-carbon and hydrogen-rich sintering technology in stratified heating mode	7
5.2.4	Near-zero CO₂ emission electric arc furnace steelmaking	8
5.3	Process optimization and innovation	9
5.3.1	Near net shape rolling technology	9
5.3.2	High-pellet-proportion ironmaking technology in blast furnace	10
5.3.3	Thermo-mechanical processing	11
5.3.4	Coke dry quenching (CDQ)	11
5.4	Resource recycling	12
5.4.1	High scrap ratio smelting technology	12
5.4.2	Top pressure recovery turbine (TRT)	13
5.4.3	Recovery of heat from crude coke oven gas	14
5.5	CO₂ capture and utilization	15
5.5.1	CO₂ capture technology	15
5.5.2	CO₂ injection in BOF	16
5.5.3	Steel and chemical co-production	17
5.5.4	CO₂ mineralization technology based on steel slag utilization	18
