Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 General characteristics of the coating 6
4.1 Zinc flake coating systems 6
4.2 Composition of the systems 6
4.3 Mechanical and physical properties and curing 6
4.4 Avoidance of internal hydrogen embrittlement 7
4.5 Coating systems and coating processes 7

5 Corrosion protection and testing 7
5.1 General 7
5.2 Neutral salt spray test 7
5.3 Sulfur dioxide test (Kesternich test) 8
5.4 Bulk handling, automatic processes such as feeding and/or sorting, storage and transport 8

6 Dimensional requirements and testing 8
6.1 General 8
6.2 Bolts, screws, studs and nuts with ISO metric threads 9
6.3 Other fasteners 10

7 Mechanical and physical properties and testing 10
7.1 Appearance 10
7.2 Corrosion resistance related to temperature 10
7.3 Test methods for thickness or coating weight determination 10
7.4 Ductility 11
7.5 Adhesion/cohesion 11
7.6 Sacrificial cathodic protection 11
7.7 Torque/tension relationship 11
7.8 Determination of hexavalent chromium 12

8 Applicability of tests 12
8.1 General 12
8.2 Tests mandatory for each lot 12
8.3 Tests for in-process control 12
8.4 Tests to be conducted when specified by the purchaser 12

9 Designation 13
9.1 Designation of zinc flake coating systems for the order 13
9.2 Designation of zinc flake coating systems for labelling 13

10 Ordering requirements 14

Annex A (informative) Design aspects and assembly of coated fasteners 15

Annex B (informative) Coating thickness and thread clearance for ISO metric screw threads 19

Annex C (informative) Control of the corrosivity of the cabinet for neutral salt spray test for coated fasteners 26
