

ISO 21843:2018 (E)

Determination of the resistance to hydrocarbon pool fires of fire protection materials and systems for pressure vessels

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Symbols and abbreviated terms
5	Principle
6	Test equipment
6.1	General
6.2	Burner arrangement
6.3	Fuel supply for burners
6.4	Test fluids
6.5	Test building
7	Calibration tests
7.1	General requirements
7.2	Calibration test vessel construction
7.3	Calibration test procedure
7.4	Analysis of calibration tests
7.5	Requirements for successful calibration tests
7.6	Environmental conditions
7.7	Tolerances
7.8	Calibration report
8	Construction of fire test specimens
9	Instrumentation
10	Fire protection materials and systems
10.1	General
10.2	Applied fire protection materials
10.3	Assemblies and mounted fire protection systems
11	Test procedure
12	Termination of the test
13	Repeatability and reproducibility
14	Uncertainty of measurement
15	Test report
16	Practical application of test results
16.1	Pressure relief valve (PRV)
16.2	Propane (or alternative test fluid) fill level

17	Performance criteria
17.1	General
17.2	Substrate temperature
17.3	Coatings and spray-applied materials
17.4	Systems and assemblies
18	Factors affecting the validity of the test
18.1	Interruption of the test
18.2	Failure of thermocouples and DFTs
18.3	Failure of pressure transducers
18.4	Test related tube and pipe
18.5	Variation in environmental conditions
18.6	Directional flame thermometer (DFT) results
19	Recommended classification procedures
19.1	General
19.2	Type of fire
19.3	Type of application
19.4	Classification based on temperature rise and period of resistance
19.5	Classification based on duration before failure
Annex A	(informative) Example P&I diagram for test facility
Annex B	(informative) Directional flame thermometers (DFTs)
B.1	General
Annex C	(normative) Method of affixing thermometers
C.1	General
Annex D	(informative) Radiation convection balance
D.1	General
D.2	Method 1: Calculation from temperature data
D.2.1	Flame temperature
D.2.2	Surface emissivity (ϵ_s)
D.2.3	Calorimeter temperature (T_{cal})
D.2.4	DFT temperature (TDFT)
D.2.5	Ambient temperature (T_{amb})
D.2.6	Calculation methodology
D.3	Method 2: Thermal imager use
D.3.1	Emissivity
D.3.2	Assumptions
D.3.3	Measurement position
D.3.4	Fire emissivity
D.3.5	Flame temperature
D.3.6	Surface emissivity (ϵ_s)
D.3.7	Calorimeter temperature (T_{cal})
D.3.8	DFT temperature (TDFT)
D.3.9	Ambient temperature (T_{amb})
D.3.10	Indicated calorimeter temperature ($T_{cal-indic}$)
D.3.11	Indicated DFT temperature (TDFT-indic)
D.3.12	Energy balance equations
D.3.13	Calculation methodology
Annex E	(informative) Additional classification procedures: Classification based on duration before failure
E.1	General
E.2	Example pressure vessel fire test results
