Fire extinguishing media - Foam concentrates - Part 4: Specification for Class A foam concentrates for application on Class A fires

Contents	Page
Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Type and use of Class A foam concentrates	3
4.1 General	3
4.2 Use with sea water	3
5 Tolerance of the foam concentrate to freezing and thawing	3
6 Sediment in the foam concentrate	4
6.1 Sediment before ageing	4
6.2 Sediment after ageing	4
7 Determination of viscosity	4
7.1 Newtonian foam concentrates	4
7.2 Pseudo-plastic foam concentrates	4
8 pH of the foam concentrate	4
8.1 pH limits	4
8.2 Sensitivity to temperature	4
9 Surface tension of the foam solution	4
9.1 Before temperature conditioning	4
9.2 Temperature sensitivity	5
10 Expansion and drainage of foam	5
10.1 Expansion	5
10.1.1 Limits	5
10.2 Drainage	5
10.2.1 Limits	5
11 Test fire performance	5
12 Corrosion	5
13 Toxicology and environmental information	5
14 Marking, packaging and specification sheet	5
14.1 Marking	5
14.2 Packaging	6
14.3 Specification sheet	6
Annex A (normative) Preliminary sampling and conditioning of the foam concentrate	7
Annex B (normative) Determination of tolerance to freezing and thawing	8
Annex C (normative) Determination of percentage of sediment	10
Annex D (normative) Determination of viscosity for pseudo-plastic foam concentrates	11
Annex E (normative) Determination of surface tension	13
Annex F (normative) Determination of expansion and drainage time	14

Annex G (normative) Determination of fire test performance.....	20
Annex H (normative) Toxicology and environmental information.....	22
Annex I (informative) Compatibility.....	23
Annex J (normative) Determination of viscosity using a rotational viscometer with defined shear rate.....	24
Bibliography.....	28
