ISO 22366:2026-01 (E)

Security and resilience - Community resilience - Framework and principles for energy resilience

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 1

4 Principles of energy resilience 2

5 Relevant stakeholders and their roles 3
5.1 General 3
5.2 Governments 4
5.3 Critical industries in the energy supply network 4
5.4 Energy users 5
5.5 Financial institutions 6
5.6 Emergency and rescue services 6

6 Approaches for enhancing energy resilience 6
6.1 General 6
6.2 Identifying events affecting the energy system 7
6.3 Assessing risks by event 8
6.4 Designing resilient energy supply networks 8
6.5 Ensuring a resilient energy supply 8
6.6 Investing in projects for energy resilience 8
6.7 Implementing asset management 9
6.8 Adopting emerging technologies 9
6.9 Sharing knowledge 9
6.10 Developing and implementing an energy resilience plan 9
6.11 Building sustainability into energy resilience 9

7 Criteria for the energy resilience plan 10
7.1 General 10
7.2 Structured internal/external communication 10
7.3 Governance and resources for enhancing energy resilience 10
7.4 Emergency response system 11
7.5 Energy supply network management 12
7.6 Financing for energy resilience enhancement 12
7.7 Education and training 12
7.8 Apply the build back better concept 13

8 Cooperative actions for the improvement of energy resilience 13
8.1 General 13
8.2 Involvement of financial sectors 13
8.3 Promote expertise through cooperation 14
8.4 Cooperation for emergency communications 14
