Foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 6

5 Apparatus 7
5.1 Extrusion plastometer 7
5.2 Accessory equipment 11

6 Test sample 12
6.1 Sample form 12
6.2 Conditioning 12

7 Temperature verification, cleaning and maintenance of the apparatus 13
7.1 Verification of the temperature control system 13
7.2 Cleaning the apparatus 14
7.3 Vertical alignment of the instrument 14

8 Procedure A: mass-measurement method 14
8.1 Selection of temperature and load 14
8.2 Cleaning 14
8.3 Selection of sample mass and charging the cylinder 14
8.4 Measurements 15
8.5 Expression of results 16

9 Procedure B: displacement-measurement method 17
9.1 Selection of temperature and load 17
9.2 Cleaning 17
9.3 Minimum piston displacement distance 17
9.4 Selection of sample mass and charging the cylinder 17
9.5 Measurements 17
9.6 Expression of results 18

10 Flow rate ratio (FRR) 19

11 Precision 20

12 Test report 20

Annex A (normative) Test conditions for MFR and MVR determinations 22

Annex B (informative) Conditions specified in International Standards for the determination of the melt flow rate of thermoplastic materials 23

Annex C (informative) Device and procedure for preforming a compacted charge of material by compression 24

Annex D (informative) Precision data for polypropylene obtained from an intercomparison of MFR and MVR testing 27

Bibliography 28
