|-----------------|---|-------------|
| Foreword .....  |   | 3           |
| 1               | Scope .....                                 | 4           |
| 2               | Normative references .....                  | 4           |
| 3               | Terms and definitions .....                 | 4           |
| 4               | Principle .....                             | 5           |
| 5               | Apparatus .....                             | 5           |
| 6               | Test specimen preparation .....             | 5           |
| 6.1             | General .....                               | 5           |
| 6.2             | Test specimens from finished products ..... | 6           |
| 6.3             | Test specimen conditioning .....            | 6           |
| 6.4             | Test specimen mass .....                    | 6           |
| 7               | Calibration .....                           | 6           |
| 7.1             | Mass calibration .....                      | 6           |
| 7.2             | Temperature calibration .....               | 6           |
| 8               | Procedure .....                             | 7           |
| 8.1             | General .....                               | 7           |
| 8.2             | Temperature scanning mode .....             | 7           |
| 8.3             | Isothermal mode .....                       | 8           |
| 9               | Expression of results .....                 | 8           |
| 9.1             | Graphical representation .....              | 8           |
| 9.2             | Determination of increase in mass .....     | 8           |
| 9.3             | Determination of loss in mass .....         | 9           |
| 10              | Test report .....                           | 11          |
