ISO 20975-2:2018 (E)

Fibre-reinforced plastic compositess — Determination of laminate through-thickness properties — Part 2: Determination of the elastic modulus, the strength and the Weibull size effects by flexural test of unidirectional laminate, for carbon-fibre based systems

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Conditioning

5.1 Conditioning of test specimen
5.2 Temperature and humidity in testing

6 Apparatus

7 Test specimens

7.1 Shape and dimensions
7.2 Preparation of specimens
7.2.1 General
7.2.2 Test plate
7.3 Specimen inspection
7.4 Number of specimens

8 Procedure

9 Calculations

9.1 Through-thickness tensile stress
9.2 Through-thickness tensile strength
9.3 Weibull modulus by flexural test
9.4 Effective volume of flexural specimen
9.5 Through-thickness tensile strain
9.6 Through-thickness tensile strain at failure
9.7 Through-thickness tensile modulus
9.8 Significant figures of stress and elastic modulus
9.9 Expression of results

10 Precision

11 Test report

Annex A (informative) Precision data obtained from an interlaboratory test

A.1 General
A.2 Procedure
A.3 Results
