DIN EN 17117-2:2021-09 (E)

Rubber- or plastics-coated fabrics - Mechanical test methods under biaxial stress states - Part 2: Determination of the pattern compensation values

Contents

Page

European foreword 3

Introduction 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 5

4 Principle 8

5 Apparatus 8
5.1 Biaxial test equipment 8
5.2 Measurement of load 8
5.3 Measurement of strain 8

6 Sampling and preparation of test specimens 8
6.1 Bulk sample (number of pieces from a shipment or lot) 8
6.2 Number of laboratory samples 8
6.3 Specimen geometry and preparation 8
6.3.1 General 8
6.3.2 Contact strain measurement 8
6.3.3 Non-contact strain measurement 8

7 Atmosphere for conditioning and testing 8

8 Test procedure 9
8.1 Mounting of the specimen 9
8.2 Loading and selection of strain values 9
8.3 Testing 12
8.4 Recording 12

9 Representation of test results and calculation of compensation values 12
9.1 Representation 12
9.2 Determination of compensation values 13
9.3 Decompensation 13
9.4 Comparable measures of extensibility 13

10 Test report 13

Annex A (informative) Load profiles and selected strain values (examples) 14

A.1 Generality 14
A.2 Load profiles - example I 14
A.3 Load profiles - example II 15
A.4 Load profiles - example III 18

Annex B (informative) Example evaluation of project specific compensation values 19

Annex C (normative) Load profile for comparative extensibility measures of coated fabrics 22
