

ISO 22183:2023-05 (E)

Plastics - Validation of force-time curves obtained from high-speed tensile tests

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	Principle	4
5	Measurement of the natural oscillation spectrum of the grip and force transducer configuration	5
5.1	Measurement of natural oscillation frequencies	5
5.1.1	Set-up of the high-speed tensile equipment	5
5.1.2	Set-up of the striker	5
5.1.3	Measurement procedure	5
5.2	Determination of the natural oscillation spectrum	6
6	Validation	7
6.1	Minimum event time	7
6.2	Maximum allowed intensity	8
7	Test report	9
Annex A (informative) Configuration of the high-speed testing machine		11
Annex B (informative) Example for the measurement of natural oscillation frequencies		15
Annex C (informative) Influence of a set position on the natural oscillation spectrum		18
Annex D (informative) Relation between the nominal test speed and the nominal strain		21
Bibliography		23
