1 Scope 5

2 Normative references 5

3 Terms, definitions and symbols 5
3.1 Terms and definitions 5
3.2 Symbols 7
3.3 Refrigerant circuit state points 9

4 Uncertainty of measurement and test conditions 10
4.1 Uncertainty of performance data 10
4.2 Uncertainty of measurement 10
4.3 Test conditions 11

5 General requirements 13
5.1 Calculation methods 13
5.1.1 Principle 13
5.1.2 Specific enthalpy 13
5.1.3 Refrigerant mass flow 13
5.1.4 Power absorbed 13
5.1.5 Basic formulas 13
5.2 Requirements for the selection of test method 15
5.2.1 General 15
5.2.2 Second concurrent test 15
5.3 Test period 15
5.3.1 General 15
5.3.2 Steady-state conditions 15
5.3.3 Recording of measured data 16
5.4 Pressure and temperature measuring points 16
5.5 Oil circulation 16
5.6 Fractionation 16
5.7 Calibration of calorimeters for methods A, B and C 16
5.7.1 Heat leakage 16
5.7.2 Reference temperature 17
5.7.3 Calibration procedure 17
5.8 Source of refrigerant data 17

6 Test methods 17
6.1 General 17
6.2 List of test methods 17
6.2.1 Calorimetric methods 17
6.2.2 Flow meter methods 18
6.3 Method A: Secondary fluid calorimeter on the suction side 18
6.3.1 Description 18
6.3.2 Calibration 21
6.3.3 Test procedure 21
6.3.4 Requirements 21
6.3.5 Additional information 21
6.4 Determination of refrigerant mass flow 21

6.5 Method B: Dry system refrigerant calorimeter on the suction side 21
6.5.1 Description 21
6.5.2 Calibration 25
6.5.3 Test procedure 25
6.5.4 Requirements 25
6.5.5 Additional information 25
6.5.6 Determination of refrigerant mass flow 25
6.6 Method C: Water-cooled condenser/gas cooler on the discharge side 26
6.6.1 Description 26
6.6.2 Calibration 28
6.6.3 Test procedure 28
6.6.4 Requirements 28
6.6.5 Additional information 28
6.6.6 Determination of refrigerant mass flow 28
6.7 Method D: Refrigerant gas flow meter 28
6.7.1 Description 28
6.7.2 Requirements 31
6.7.3 Additional information 31
6.7.4 Determination of refrigerant mass flow 31
6.8 Method E: Refrigerant flow meter in the liquid line 31
6.8.1 General 31
6.8.2 Description 31
6.8.3 Test procedure 32
6.8.4 Requirements 32
6.8.5 Additional information 32
6.8.6 Determination of the refrigerant and oil mass flow 33

7 Determination of the power absorbed by the compressor 33
7.1 Measurement 33
7.1.1 General 33
7.1.2 Measurement for externally driven compressors 33
7.1.3 Measurement for motor compressors 33
7.2 Calculation 33

8 Test report 33
8.1 General 33
8.2 Basic data 34
8.3 Additional data 34
8.4 Test results 34

Annex A (normative) Conversion of measured performance data to specified test conditions for compressors with intermediate pressure port 36
