

DIN EN 13136:2020-08 (Englis ch)

Refrigerating systems and heat pumps - Pressure relief devices and their associated piping - Methods for calculation

Contents	Page
European foreword	4
Introduction	5
1 Scope	6
2 Normative references	6
3 Terms and definitions	7
4 Symbols	7
5 General	9
6 Pressure relief devices for protection of system components	10
6.1 General	10
6.2 Excessive pressure caused by heat sources	10
6.2.1 External heat sources	10
6.2.2 Internal heat sources	11
6.3 Excessive pressure caused by compressors	12
6.4 Excessive pressure caused by liquid expansion	12
7 Discharge capacities of pressure relief devices	12
7.1 General	12
7.2 Determination of pressure relief valve performance	13
7.2.1 Determination of coefficient of discharge	13
7.2.2 Critical and sub-critical flow	13
7.2.3 Function of the isentropic exponent (C)	13
7.2.4 Correction factor for sub-critical flow	13
7.2.5 Discharge capacity of pressure relief valves	14
7.3 Calculation of capacity and flow area of bursting discs or fusible plugs	14
7.4 Pressure loss in upstream/downstream lines	15
7.4.1 General	15
7.4.2 Pressure loss in components	15
7.4.3 Pressure loss in the upstream line	16
7.4.4 Pressure loss in the downstream line	16
Annex A (normative) Values of functions, factors and properties of refrigerants	17
Annex B (informative) Calculation of flow areas for non-evaporating and evaporating liquids	26
B.1 Calculation of the flow area for non-evaporating liquids	26
B.2 Calculation of the flow area for evaporating liquids	26
Annex C (informative) Example of calculation for sizing pressure relief devices with the corresponding pipes	28
C.1 Assumptions for the calculation example	29
C.2 Calculation of the required minimum discharge capacity, Q _{md} at standard heat flow rate ..	29
C.3 Calculation of the required minimum discharge capacity Q _{md} at reduced heat flow rate ..	30
C.4 Calculation of flow area A _c , selection of pressure relief valve	30

C.5	Pressure loss in upstream line (from vessel to pressure relief valve)	31
C.6	Pressure loss in downstream line (from pressure relief valve to atmosphere)	32
Annex ZA (informative)	Relationship between this European Standard and the essential requirements of Directive 2014/68/EU (Pressure equipment Directive) aimed to be covered	34
Bibliography	35
