ISO 22043:2020 (E)

Ice-cream freezers — Classification, requirements and test conditions

Contents

Foreword

1 Scope

2 Normative references

3 Terms and definitions

3.1 General
3.2 Parts of ice-cream freezers
3.3 Physical aspects and dimensions
3.4 Performance characteristics
3.5 Test environment

4 Symbols and abbreviated terms

5 Classification and requirements

5.1 Classification
5.2 Requirements
5.2.1 Construction
5.2.1.1 Strength and rigidity
5.2.1.2 Pipes and connections
5.2.1.3 Lids
5.2.1.4 Joints and seams
5.2.2 Materials
5.2.2.1 General
5.2.2.2 Corrosion resistance
5.2.2.3 Thermal insulation
5.2.3 Refrigerating system
5.2.3.1 Design and construction
5.2.3.2 Condensation
5.2.3.3 System protection
5.2.3.4 Refrigerant
5.2.4 Electrical components
5.2.4.1 General
5.2.4.2 Temperature display
5.2.4.3 Temperature-measuring instrument
5.2.4.4 Temperature sensor location
5.2.5 Operating characteristics
5.2.5.1 Water vapour condensation
5.2.5.2 Energy consumption
5.2.5.3 Specific energy consumption

6 Tests

6.1 General
6.2 Tests outside test room
6.2.1 General
6.2.2 Seal test for lids
6.2.3 Test on durability of lid
6.2.3.1 General
6.2.3.2 Opening sequence
6.2.3.3 Closing sequence
6.2.4 Linear dimensions, areas and volumes
6.2.5 Net volume calculation
6.3 Tests inside test room
6.3.1 General

6.3.2 Test room conditions
6.3.2.1 Design, walls, floor and radiant heat
6.3.2.2 Thermal and air flow characteristics
6.3.2.3 Climate classes
6.3.3 Test packages and life-time
6.3.3.1 General
6.3.3.2 M-packages and life-time
6.3.3.3 Alternative for filling test packages
6.3.4 Instruments, measuring equipment and measuring expanded measurement uncertainty
6.3.5 Preparation of test ice-cream freezer
6.3.5.1 Selection, installation and positioning within the test room
6.3.5.2 Air movement
6.3.5.3 Climate measuring point
6.3.5.4 Loading the ice-cream freezer
6.3.5.4.1 General
6.3.5.4.2 Loading heights
6.3.5.4.3 M-package locations
6.3.5.4.4 Longitudinal section
6.3.5.4.5 Cross-section
6.3.5.5 Running in
6.3.5.6 Stable conditions
6.3.5.7 Test period
6.3.5.8 Lighting and night-covers
6.3.5.9 Test on several ice-cream freezers in the same test room
6.3.6 Test on ice-cream freezers
6.3.6.1 Temperature test
6.3.6.1.1 General
6.3.6.1.2 Test conditions
6.3.6.1.3 Temperature curves of M-packages
6.3.6.1.4 Calculation of average mean temperature
6.3.6.2 Lid opening sequence
6.3.6.3 Power supply
6.3.6.4 Water vapour condensation test
6.3.6.5 Temperature rise time test for C1 ice-cream freezers
6.3.6.6 Electrical energy consumption test
6.3.6.6.1 Test conditions
6.3.6.6.2 Energy consumption measurement
6.3.6.6.3 Calculation of TEC
6.3.6.6.4 Calculation of specific energy consumption (SEC)

7 Test report

7.1 General
7.2 Tests outside test room
7.3 Tests inside test room

8 Marking

8.1 Load limit
8.2 Marking plate
8.3 Information to be supplied by the manufacturer

Annex A (informative) Ice-cream freezer families

Annex B (normative) Equivalent volume calculation

Annex C (normative) TDA calculation

C.1 General
C.2 Calculation of TDA

Annex D (informative) Test for absence of odour and taste

D.1 Preparation and testing
D.1.1 Ambient temperature
D.1.2 Cleaning
D.1.3 Thermostat setting
D.1.4 Samples

D.1.5 Test period
D.2 Examination of samples
D.2.1 Conditions
D.2.2 Evaluation

Annex E (normative) Performance and energy rating of ice-cream freezers

E.1 General
E.2 Standard rating conditions for ice-cream freezers
E.3 Specific energy consumption (SEC) for ice-cream freezers
