

DIN EN ISO 21922:2023-09 (E)

Refrigerating systems and heat pumps - Valves - Requirements, testing and marking (ISO 21922:2021)

Contents		Page
	European foreword	4
	Annex ZA (informative)	5
	Foreword	6
	Introduction	7
1	Scope	8
2	Normative references	8
3	Terms and definitions	8
4	List of symbols	11
5	General requirements	13
	5.1 Installation and operation	13
	5.2 Components under pressure	13
	5.3 Excessive mechanical stress	14
	5.4 Tightness	14
	5.5 Functioning of hand-operated valves	14
	5.6 Functioning of actuator-operated valves	14
6	Materials	14
	6.1 General	14
	6.1.1 Using metallic materials	14
	6.1.2 Using non-metallic materials	14
	6.2 Requirements for materials to be used for pressure bearing parts	15
	6.3 Compatibility of connections	15
	6.4 Ductility	15
	6.5 Ageing	15
	6.6 Castings	15
	6.7 Forged and welded components	15
	6.8 Nuts, bolts and screws	15
	6.9 Spindles	16
	6.10 Glass materials	16
	6.11 Requirements for documentation	16
	6.12 Impact energy <i>KV</i> measurement on sub-sized specimens	17
7	Design	17
	7.1 General	17
	7.2 Maximum allowable pressure	18
9	7.3 Valve and valve assembly strength design	18
	7.4 Bodies and bonnets	19
	7.5 Nuts, bolts, screws, fasteners and seals	19
	7.6 Seat tightness	19
	9.4 7.6.1 General	19
	7.6.2 Seat tightness: type test	20
	7.7 Screwed spindles and shafts	21
	7.8 Design of glands	21
	7.9 Valve seats	22
	7.10 Caps	22
	7.11 Hand operated valves	23
	7.12 Corrosion protection	23
8	Appropriate manufacturing procedures	23

9	Production testing	24
9.1	Strength pressure testing	24
9.2	Tightness testing	24
9.3	Seat sealing capacity	25
9.4	Caps	25
10	Marking and additional information	25
10.1	General	25
10.2	Marking	26
10.3	Example how to mark the allowable limits of pressure and temperature	26
10.4	Hand-operated regulating valves	26
10.5	Caps	26
11	Documentation	27
11.1	General	27
11.2	Documentation for valves	27
11.3	Additional documentation for valve assemblies	27
Annex A	(normative) Procedure for the design of a valve by calculation	28
Annex B	(normative) Experimental design method for valves	31
Annex C	(normative) Determination of the allowable pressure at the maximum operating temperature	35
Annex D	(normative) Determination of the allowable pressure at minimum operating temperature — Requirements to avoid brittle fracture	36
Annex E	(informative) Compilation of material characteristics of frequently used materials	47
Annex F	(informative) Justification of the individual methods	67
Annex G	(normative) Pressure strength verification of valve assemblies	73
Annex H	(normative) Determination of category for valves	74
Annex I	(informative) DN system	79
Annex J	(normative) Additional requirements — Sight glasses and indicators	82
Annex K	(normative) Compatibility screening test	85
Annex L	(informative) Stress corrosion cracking	89
Annex M	(normative) Method for sizing the operating element of hand-operated valves	92
Bibliography	94
