Method of test for burning velocity measurement of A2L flammable gases

Contents		Page
Foreword		v
Introduction		vi
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General test method	2
4.1	General	2
4.2	Principle of the test method	2
5	Measurement parameters	4
5.1	General	4
5.2	Flame propagation velocity	4
5.3	Flame front area	5
5.4	Cross-sectional area of the flame base	5
6	Test method	5
6.1	General	5
6.2	Gas handling and mixtures preparation	6
6.3	The test tube	7
6.3.1	General	7
6.3.2	Dimensions	8
6.3.3	Position	9
6.3.4	Tube ends	9
6.3.5	Interchangeable damping orifices	9
6.3.6	Flame quenching	10
6.3.7	Tube glass type	10
6.3.8	Tube purging with test mixture	10
6.3.9	Tube etching	10
6.4	Ignition	11
6.4.1	General	11
6.4.2	Ignition type	11
6.4.3	Positioning	11
6.4.4	Electrodes	11
6.4.5	Power supply	11
6.4.6	Ignition time	11
6.5	Flame front visualization	12
6.5.1	General	12
6.5.2	Luminous zone and direct photography	12
6.5.3	Flame emission spectra	12
6.5.4	Acquisition camera	12
6.5.5	Exposure Time	13
6.5.6	Positioning	13
6.5.7	Scaling and optical distortion	13
6.5.8	Resolution of the flame images	14
6.6	Purge, exhaust and gas treatment systems	14
6.7	Test temperature setting	15
6.8	Experimental protocol for mixtures prepared using partial pressure technique	16

7	Evaluation and expression of results	16
7.1	General	16
7.2	Uncertainty	17
7.2.1	Uncertainty in the burning velocity	17
7.2.2	Uncertainty estimation of concentrations	17
8	Safety precautions	17
9	Overview on flame shape, propagation regimes and stability	18
9.1	Flame shape	18
9.2	Flame propagation regimes	19
9.3	Flame stability in tubes	20
9.4	Observations of flames in tubes	21
9.5	Flame quenching in circular tubes	21
9.6	Flame propagation velocity and tube diameter	22
9.7	Flame area calculation	22
	Bibliography	24
