

DIN EN 1971-2:2012-02 (E)

Copper and copper alloys - Eddy current test for measuring defects on seamless round copper and copper alloy tubes - Part 2: Test with an internal probe on the inner surface

Contents		Page
Foreword		3
Introduction		4
1	Scope	5
2	Normative references	5
3	Terms and definitions	5
4	General requirements	5
4.1	Personnel qualification	5
4.2	Condition of tube to be tested	5
4.3	Equipment	6
5	Reference standard tube	6
6	Acceptance criteria	7
6.1	Detection of local discontinuities by internal probes systems	7
6.2	Detection of non-local discontinuities by internal probes systems with lower detection levels	7
6.3	Other test methods	8
7	Instrument adjustment	8
