DIN EN 13603:2021-07 (Engli sch)

Copper and copper alloys - Test methods for assessing protective tin coatings on drawn round copper wire for electrical purposes

Contents

Page

European foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Thickness of the unalloyed tin coating 5
4.1 General 5
4.2 Principle of the method based on the electrolytic dissolution of the tin coating 5
4.2.1 General 5
4.2.2 Reagents and materials 5
4.2.3 Apparatus 5
4.2.4 Preparation of the test piece 7
4.2.5 Procedure for determining the thickness of unalloyed tin coatings 7
4.2.6 Expression of results 10
4.3 Principle of the method based on XRF 11
4.3.1 General 11
4.3.2 Devices with measuring spots larger than the wire dia7meter -- Overlap technique 11
4.3.3 Devices with measuring spots smaller than the wire diameter - Full-spot technique 12
4.3.4 Preparation of the test piece 12
4.3.5 Factors affecting the measuring accuracy 13

5 Continuity of the tin coating 17
5.1 Principle 17
5.2 Test solution 17
5.3 Reference solution 18
5.4 Preparation of the test piece 18
5.5 Cleaning of the test piece 18
5.6 Immersion for testing 18
5.7 Determination 19
5.7.1 General 19
5.7.2 Comparison by Nessler cylinders 19
5.7.3 Colorimetric method 19

6 Adherence of the tin coating 19
6.1 Principle 19
6.2 Stock solution 19
6.3 Test solution 19
6.4 Preparation of the test piece 19
6.5 Cleaning of the test piece 20
6.6 Immersion for testing 20
6.7 Examination 20

7 Test report 21
