DIN EN 14531-6:2009-12 (E)

Railway applications - Methods for calculation of stopping and slowing distances and i mmobilisation braking - Part 6: Step by step calculations for train sets or single vehicles

Contents

Page

Foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Definitions, symbols and abbreviations 6
3.1 Terms and definitions 6
3.2 Symbols and indices 7

4 General algorithms 10
4.1 General algorithm to calculate stopping and slowing distances 10
4.2 General algorithm to calculate immobilization brake 10

5 Stopping and slowing distances calculation 10
5.1 Accuracy of input values 10
5.2 General characteristics 10
5.3 Brake equipment characteristics 12
5.4 Initial and operating characteristics 23
5.5 Sharing, proportioning of the brake forces - achieved forces 25
5.6 Braking force per axle 25
5.7 Total force on train level 25
5.8 Time step integration loop 26
5.9 Other decelerations 26
5.10 Time 27
5.11 Distance calculations 28
5.12 Other calculations 29

6 Immobilization brake calculation 31
6.1 General 31
6.2 General characteristics 32
6.3 Characteristics of the immobilization brake equipment 32
6.4 Train and operating characteristics 32
6.5 Immobilization force provided by each equipment type 33
6.6 Immobilization force 33
6.7 External forces 34
6.8 Final results 35

Annex A (normative) Workflow of kinetic and static calculations 37

Annex B (informative) Example of time step integration loop 40

Annex C (informative) Example of distance and other dynamic calculations 41

C.1 Input data 41
C.1.1 Mass data 41
C.1.2 Wheel data 42

C.1.3 Train resistance 42
C.1.4 Data for brake equipment types 42
C.1.5 Characteristics and settings of the brake equipment 44
C.1.6 Initial and final speed 44
C.1.7 Gradient 44
C.2 Calculation results 45
C.2.1 Braking force of single equipments and train resistance 45
C.2.2 Total braking force per equipment type and train resistance 46
C.2.3 Distances 46
C.2.4 Stopping time 47
C.2.5 Equivalent response time 47
C.2.6 Equivalent deceleration 47
C.2.7 Decelerations 47
C.2.8 Required adhesion 48

Annex D (informative) Example of immobilisation calculations 50

D.1 Input data 50
D.1.1 Mass data 50
D.1.2 Wheel data 51
D.1.3 Train resistance 51
D.1.4 Wind force on the train 51
D.1.5 Data for axle related disc brake equipment 51
D.1.6 Gradient 52
D.1.7 Available adhesion 52
D.1.8 Brake equipment in use 52
D.2 Calculation results of the immobilisation calculation 52
D.2.1 Immobilisation force 52
D.2.2 Immobilisation safety factor 53
D.2.3 Required adhesion per axle 53
D.2.4 Maximum achievable gradient 53

Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EC Directive 2008/27/EC 54
