

# DIN EN 15689:2010-04 (E)

## Railway applications - Track - Switches and crossings - Crossing components made of cast austenitic manganese steel

---

<b>Contents</b>		<b>Page</b>
Foreword .....		3
1	Scope .....	4
2	Normative references .....	4
3	Terms and definitions .....	5
4	Quality systems .....	5
5	Sample approval .....	5
6	General requirements .....	6
6.1	Materials (liquid chemistry) .....	6
6.2	Microstructure .....	6
6.3	Surface conditions .....	6
6.3.1	Un-machined and heat treated surfaces .....	6
6.3.2	Definition of surface zones .....	7
6.3.3	Machined surfaces .....	7
6.3.4	Tolerances .....	7
6.4	Internal soundness .....	8
6.4.1	General .....	8
6.4.2	Definition of zones and acceptance levels .....	8
6.4.3	Frequency for radiographic examination .....	12
6.5	Foundry practice .....	12
7	Acceptance tests .....	13
7.1	Chemical analysis .....	13
7.2	Impact bend .....	13
7.3	Metallographic examination .....	13
7.4	Visual inspection .....	13
7.5	Dye penetrant testing .....	13
7.6	Radiography .....	14
7.6.1	General .....	14
7.6.2	Method of radiography .....	14
8	Additional requirements for pre-hardened crossings .....	14
8.1	Qualification .....	14
8.1.1	Generally .....	14
8.1.2	Dye penetration test .....	14
8.1.3	Hardness requirements .....	14
8.2	Production tests .....	16
8.3	Monitoring of pre-hardening process .....	16
9	Weld rectification of surface discontinuities .....	16
9.1	Qualification of the weld procedure and the welder .....	16
9.2	Definition of rectification zones, max. dimensions of excavations .....	16
9.3	Testing of weld rectification .....	17
9.4	Welding records .....	17
10	Identification and marking .....	17

11	Documentation .....	18
12	Non-common cast manganese crossings .....	18
	Bibliography .....	19
