DIN EN 16860:2019-06 (E)

Railway applications - Requirements and general principles for securing payload in rail freight transport

Contents

Page

European foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Requirements for securing of payload 5
4.1 General 5
4.2 Requirements that arise from the following influencing factors 6
4.2.1 Type of wagon and operation 6
4.2.2 Infrastructure 6
4.2.3 Payload 6
4.2.4 Loads 6

5 Methods/Principles for loading and securing of payload 7
5.1 General 7
5.2 Positive-fit payload securing 8
5.3 Force-fit payload securing 8
5.4 Controlled sliding payload securing 9

6 Securing equipment 10
6.1 General 10
6.2 Payload restraint and fixing 10
6.3 Anchor points 11

Annex A (informative) Type, number and position of payload securing devices 12

Annex B (normative) Assessment methods of the loading and securing of the payload 16

B.1 General 16
B.2 Impact tests for loading methods and removable fastenings 16
B.2.1 General 16
B.2.2 Test conditions 16
B.2.3 Impact wagon 16
B.2.4 Test wagon 17
B.2.5 Measurement of impact speeds 17
B.2.6 Assessment of the results 17
B.2.7 Conversion table 18
B.3 Simulation method 18
B.3.1 Input datas 18
B.3.2 Simulation code 18
B.3.3 Acceptation criteria 18

Annex ZA (informative) Relationship between this European Standard and the essential Requirements of EU Directive 2008/57/EC aimed to be covered 19
