

DIN EN 16860:2019-06 (E)

Railway applications - Requirements and general principles for securing payload in rail freight transport

Contents		Page
European foreword		3
1	Scope	4
2	Normative references	4
3	Terms and definitions	4
4	Requirements for securing of payload	5
4.1	General	5
4.2	Requirements that arise from the following influencing factors	6
4.2.1	Type of wagon and operation	6
4.2.2	Infrastructure	6
4.2.3	Payload	6
4.2.4	Loads	6
5	Methods/Principles for loading and securing of payload	7
5.1	General	7
5.2	Positive-fit payload securing	8
5.3	Force-fit payload securing	8
5.4	Controlled sliding payload securing	9
6	Securing equipment	10
6.1	General	10
6.2	Payload restraint and fixing	10
6.3	Anchor points	11
Annex A (informative) Type, number and position of payload securing devices		12
Annex B (normative) Assessment methods of the loading and securing of the payload		16
B.1	General	16
B.2	Impact tests for loading methods and removable fastenings	16
B.2.1	General	16
B.2.2	Test conditions	16
B.2.3	Impact wagon	16
B.2.4	Test wagon	17
B.2.5	Measurement of impact speeds	17
B.2.6	Assessment of the results	17
B.2.7	Conversion table	18
B.3	Simulation method	18
B.3.1	Input datas	18
B.3.2	Simulation code	18
B.3.3	Acceptation criteria	18
Annex ZA (informative) Relationship between this European Standard and the essential Requirements of EU Directive 2008/57/EC aimed to be covered		19
